a santec company

movu inc. introduction

movu inc.

Hisashi Hasegawa

Company Introduction

45+

santec

Years Experience

Pioneering photonics products development

50%

movu

Market Position

Leading company in biometry in Ophthalmic industry

7-in-1

movu

New Ophthalmic Device

Advanced medical diagnostics through photonics technology

1979	Established in Kyoto, Japan, as Kyodo Shoji Corporation.
1983	Name changed to Santec with a focus on optical communication
1985	Santec USA established in New Jersey, USA
1993	Developed Polarization-independent tunable-wavelength optic filter
1999	Completed construction on Photonics Laboratory
2005	Developed the first commercial Swept Source OCT and the first anterior chamber SS-OCT
2006	Patent filed for SS-OCT with tunable VCSEL
2007	Developed the first SS-OCT Angiography
2008	Developed the first whole eye imaging with SS-OCT
2019	FDA approval of ARGOS biometer
2019	Strategic alliance with Alcon announced
2025	**movu inc. launched as a spin-off and began operations**

Announcement

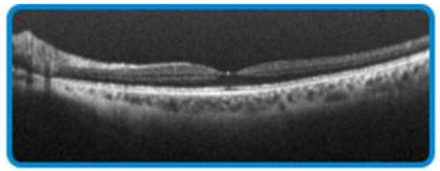

ARGONAUT

ACCELERATING INNOVATION

JOEL HONEYMAN
VP OF GLOBAL INNOVATION

MATT SAGASER
DIRECTOR OF INNOVATION ACCELERATED

PLUG AND PLAY

Bobcat®

DOOSAN Bobcat

Doosan Bobcat Company

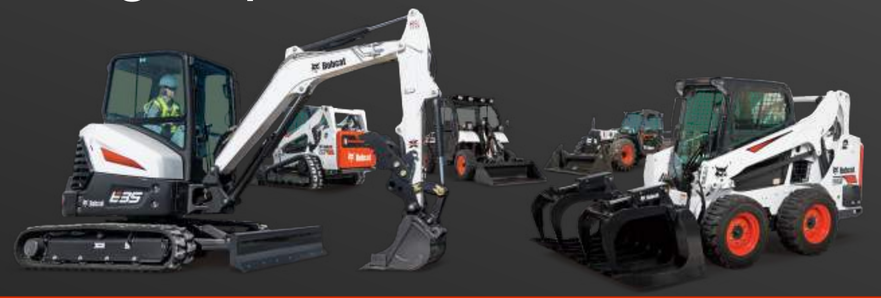

- Worldwide leader in the manufacturing and marketing of compact equipment
- Division of Korean based Doosan Corporation

Invented the Industry – 60 years of Innovation

- Bobcat created the first compact loader and predecessor to the skid-steer loader more than 60 years ago

Doosan Bobcat offers dozens of machines in eight product groups

- + the industry’s largest selection of attachments.

We continue to be the innovator in the compact equipment industry.

Bobcat

COMPACT EQUIPMENT LINEUP

Compact Track Loaders

Skid-Steer Loaders

Compact Excavators

Utility Vehicles & Toolcat Utility Work Machines

Small Articulated Loaders

Mini Track Loaders

Compact Tractors

Zero-Turn Mowers

Telehandlers

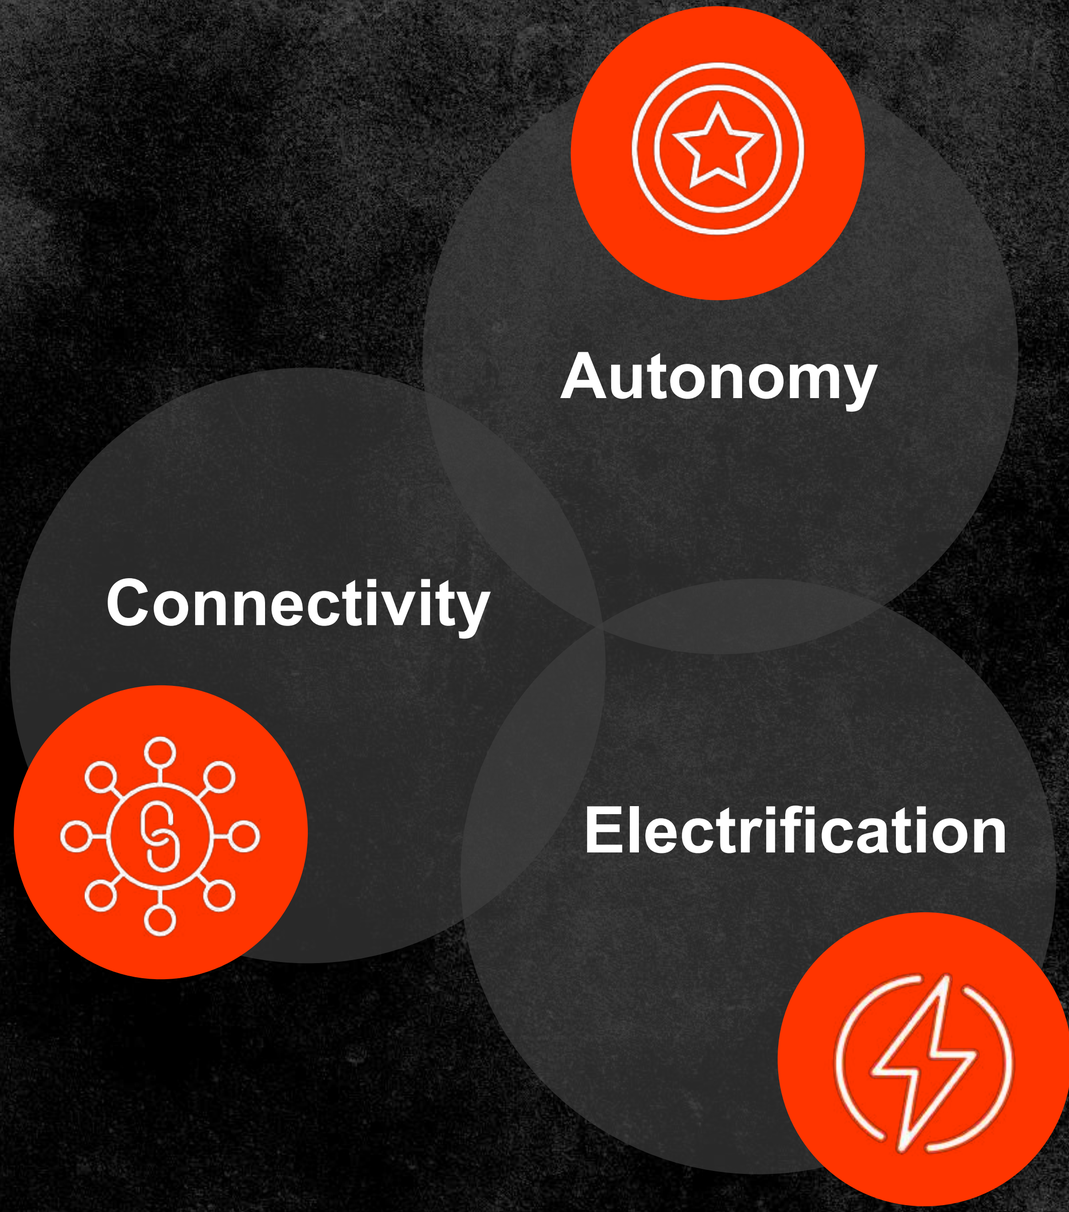

*Other products not pictured– Compact Wheel Loaders, Articulated Tractors, Light Compaction Equipment, Doosan Forklifts, Doosan Portable Power, and Attachments

Bobcat

INNOVATION CONCEPTING

The Innovation team enables the Vision to make things **"believable"**...empowering the organization to show what is **possible.**

NEW TECHNOLOGIES ARE MERGING TO CREATE NEW SOLUTIONS

EACH OF THESE AREAS REQURE US TO RESEARCH, EXPERIMENT, AND CONCEPT

Bobcat

BOBCAT INNOVATION STRATEGY

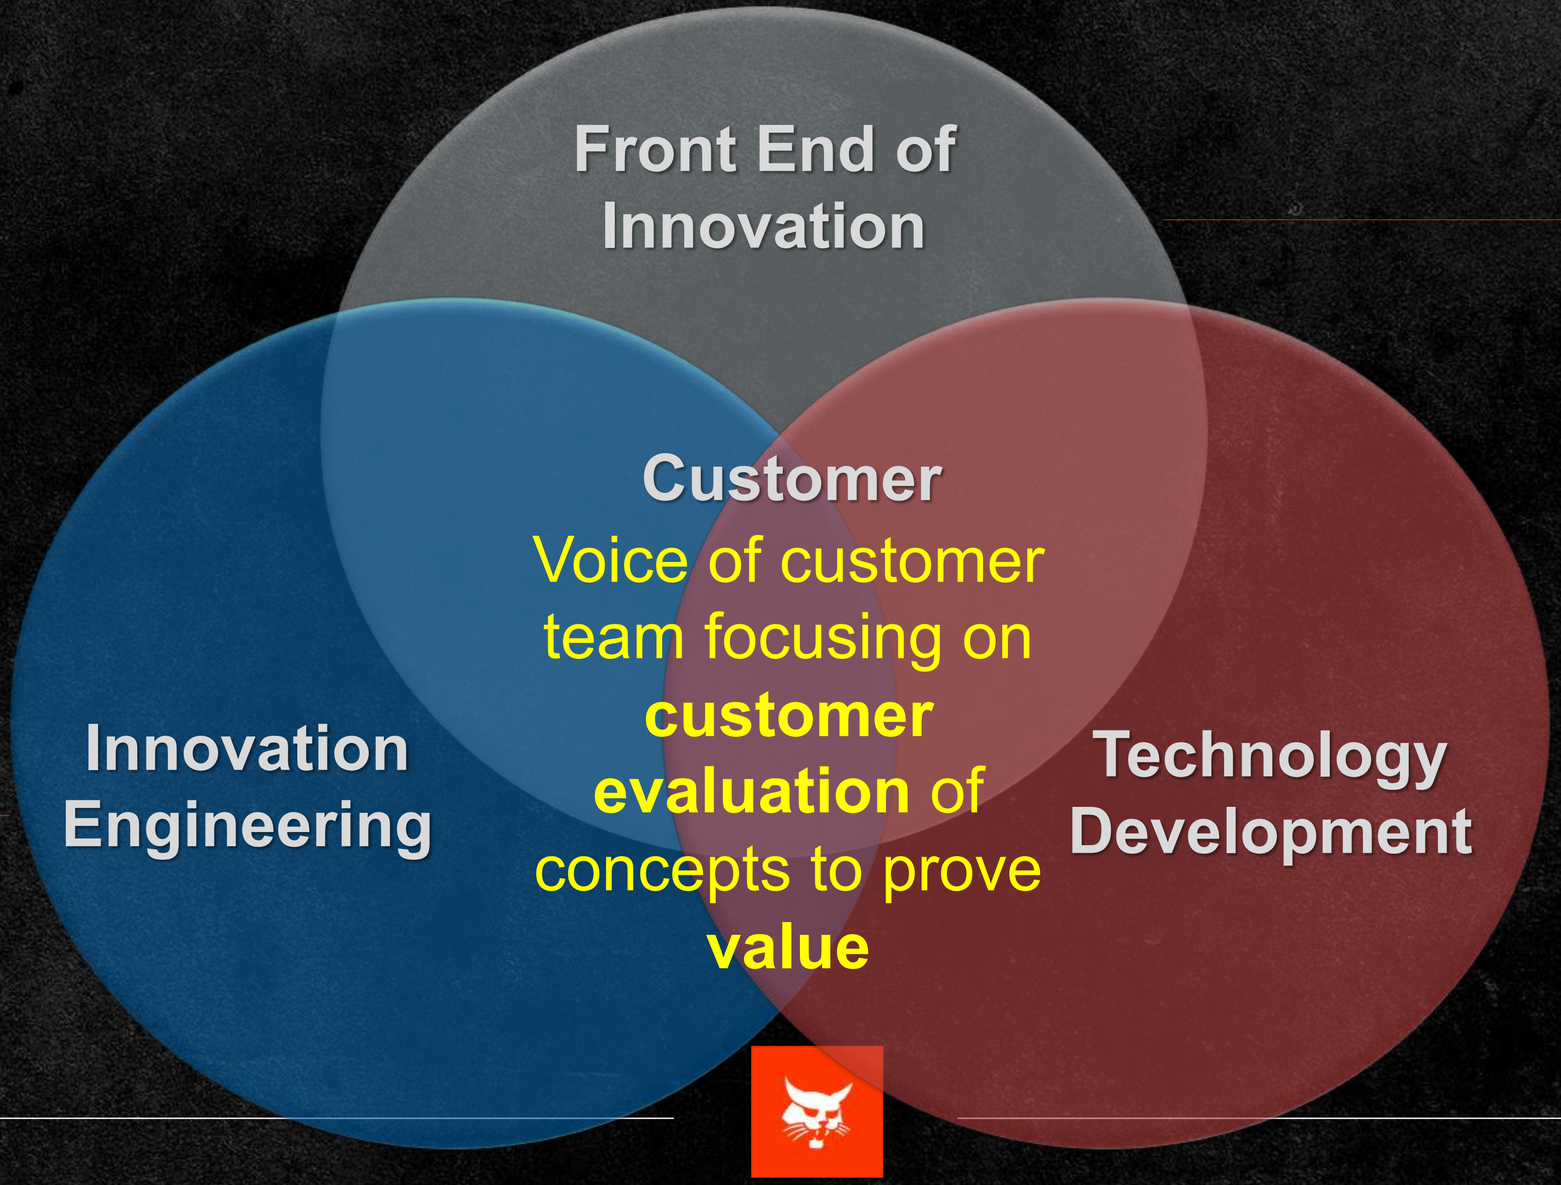

The Innovation develops **BUILDING BLOCKS** that consist of technology and other advancements, all laying a foundation to build true solutions.

The building blocks work together and in different combinations to create useful and **MEANINGFUL SOLUTIONS** for customers to enhance both today's and tomorrow's equipment.

These building blocks are essential for creating substantial improvements in **PRECISION**, **EFFICIENCY**, and **COMFORT**.

INNOVATION TEAM STRUCTURE

T7X
ALL-ELECTRIC
Bobcat
Bobcat
T7X

DESIGN CONSIDERATIONS OF THE T7X

A fully electric powertrain using electric actuation rather than hydraulics opened new possibilities of design options

Software features

- Automated bucket shake

Two-way telematics

- Full monitoring (operating time versus idle time) and over-the-air updates

Beast Mode

- Full power to drive but only when the work group is in a particular position

Monitoring current spikes – backing off when required

- Self-protecting machine

Precisely knowing the position of the work group

- Autonomy-ready

Faster development time for controls

- No tuning of valves and spools

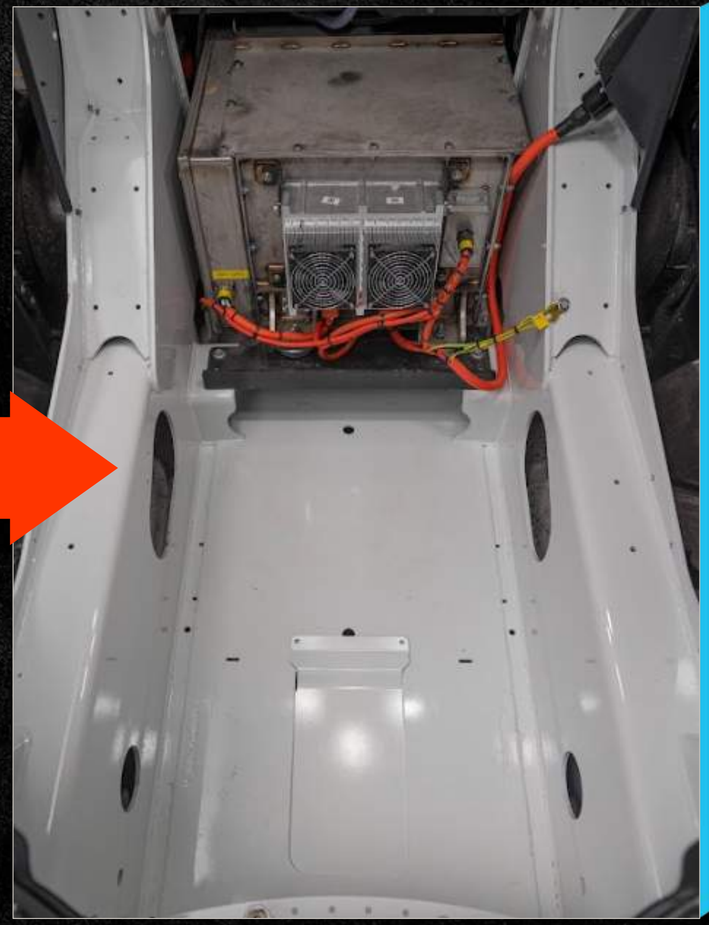

Bobcat

THE ALL-ELECTRIC PLATFORM

Bobcat T76

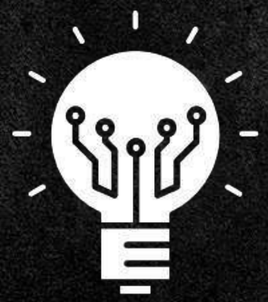

Bobcat T7X

- Diesel engine replaced with lithium-ion battery
- All hydraulics removed and replaced with electric ball screw actuators and electric drive motors
- 40% fewer parts
- 1.5 gallons of eco-friendly coolant vs. 57 gallons of oil and diesel fuel
- No engine vibration or hydraulic whine
- Virtually no noise
- 65% of traditional failures (engine / hydraulic) eliminated

ELECTRIFICATION OFFERS
FAR MORE THAN JUST
ENVIRONMENTAL BENEFITS
Bobcat

“Technology for the sake of technology – or does it solve a real jobsite problem?”

- Is it **simple** for the operator to use?
- Is it reliable? Works **every** time
- Does it increase **efficiency**, **precision** or **safety**?
- We can’t force new technology – let operators experience it – **it’s not for everybody**

THANK YOU
DOOSAN
Bobcat

NEXXA.AI

Agent Augmented Engineering for Heavy Industries

Available on Siemens Xcelerator Marketplace

PLUGANDPLAY

NVIDIA Inception Program

Nexxa drives the Digital Labor Transformation in Heavy Industries

Software transforms from a tool to a co-pilot to a digital colleague

- Heavy industries like railroads and commercial real estate run on a **fragmented, sometimes outdated tech stack**
- Automation in heavy industries has been almost **impossible due to technical limitations**
- **Agentic AI and specifically, multi-agent architecture make this market accessible for the first time ever**

TECHNOLOGY - WHY NOW

We leverage state-of-the-art models and proprietary CV

Nexxa integrates with **existing systems** and execute complex processes

Proprietary computer vision models that augment market-leading models so that the models understand custom software environments

Traction

Current booked ARR: $225,000 (>300% growth in Q1)

Q2 forecast $350,000-$400,000 in total ARR bookings

Strong and fast growing pipeline with enterprise and SMBs. ($1.45M)

$4.4M Tier-One Led Pre-Seed

Forecast:

2025: $1M
2026: $3M
2027: $12M

VISION

Nexxa will be the Artificial Super Intelligence for technical employees in heavy industries

We identified two steps to make our vision reality:

01

Augment and accelerate humans in their complex technical work.

02

Nexxa takes over the technical work end to end for the human workforce.

Saturn

World Model for robotics & autonomous systems

Contact
Elisa Seghetti

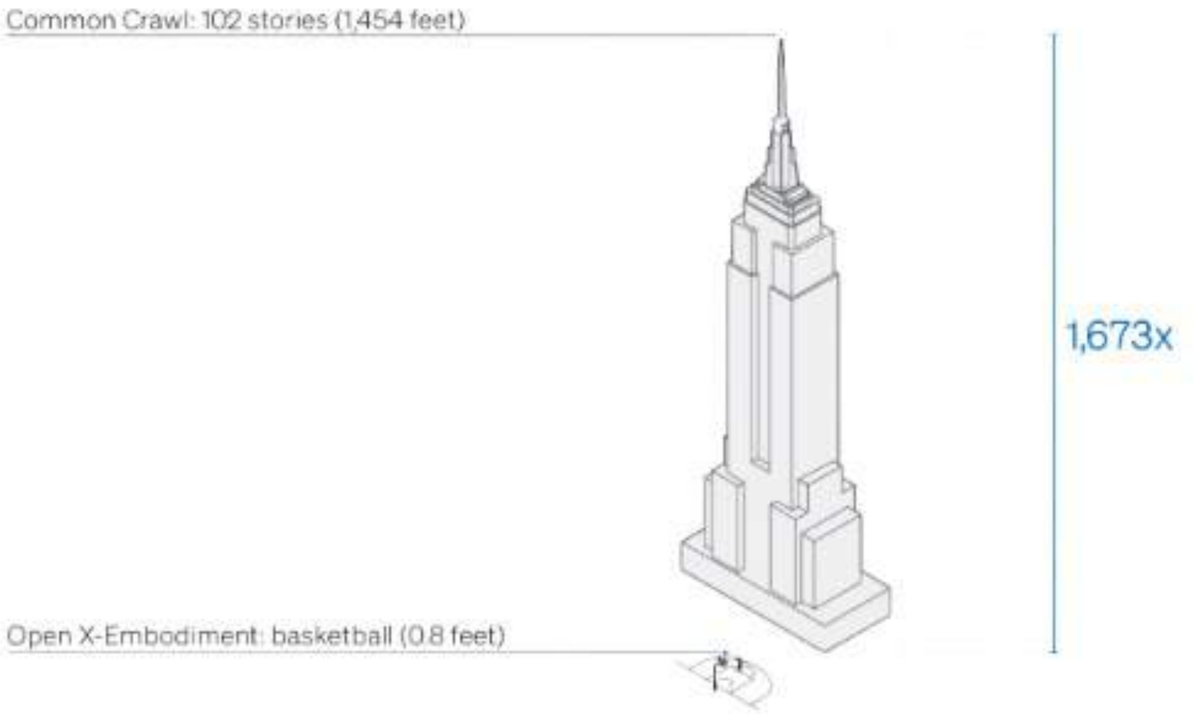

E-mail
hello@asksaturn.ai

Website
www.asksaturn.ai

We lack data to train robots

While **digital data** is **abundant**, **real-world data** are **scarce** and **hard** to gather **quickly**. Hardware development iteration today takes **months.**

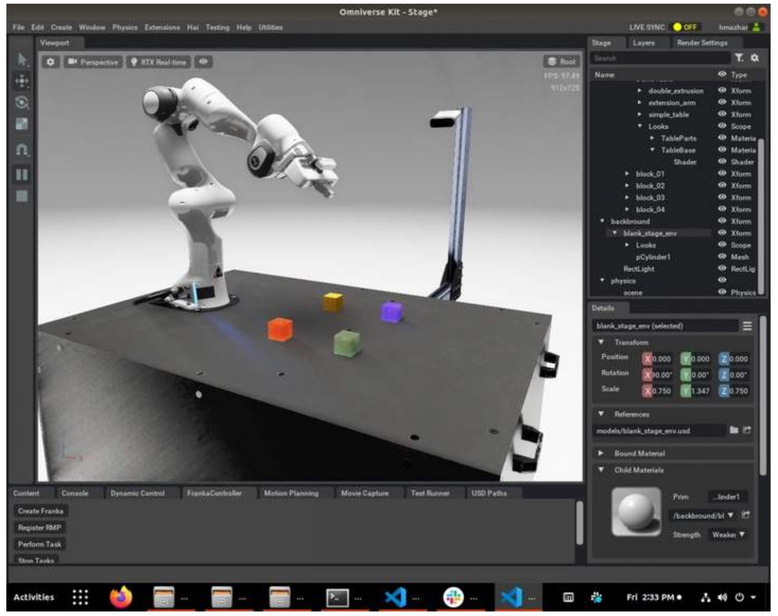

AI’s rise can’t come to the physical world, yet.

Neither data collection nor simulations scale

Human teleoperation and physics engines require enormous amounts of time and effort. Still, they lack generality and require continuous iteration cycles that take months.

We have spent years training algorithms that interact with the real world and we learned that:

AI can only be as good as your simulator

as deep learning models will learn to exploit any inaccuracies in it

Saturn: world model to simulate our physical world

PROMPT

Describe robot’s instructions and inform Saturn with text and camera sensor data.

GENERATE

Saturn renders the simulation as frame + motion data for model training and testing.

CONTROL

Control millions of possible future scenarios in real-time, frame by frame.

Generative World Model

THE SATURN API
From zero to simulation in no time

Video history

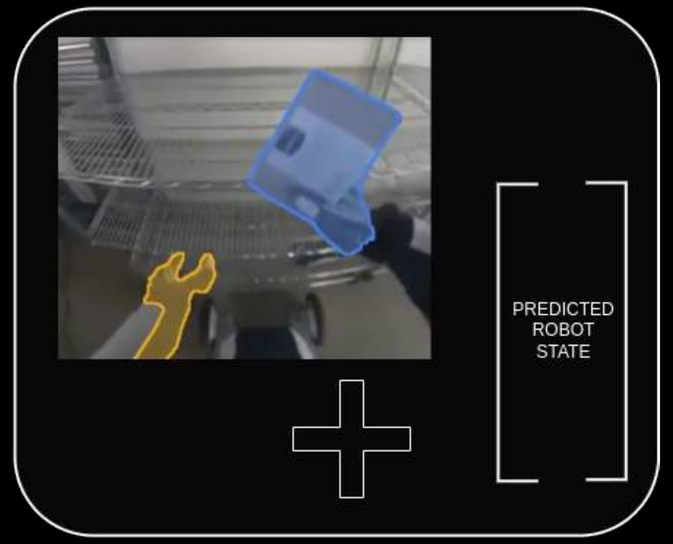

Extra contextual information

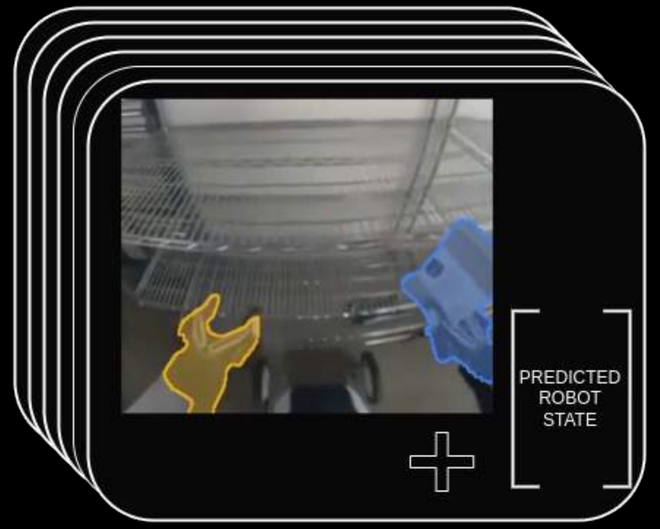

Text

More sensor data

Robot state (e.g. the position of the joints of the robot, the state of the gripper, ...)

Spin multiple futures by simply prompting Saturn with video and extra contextual information

Market entry

First target niche: Robots that executes manipulation and navigation tasks autonomously. Painful & urgent problem, fastest growing segment.

Team

Business

Elisa Seghetti - Founded and grew an AI company, building enterprise AI solutions ranging from pharma to SMBs. She is expert in sales and GTM for deep tech, as well as scaling technical teams.

Engineering

Simone Totaro - Reinforcement learning. From simulators for smart grids to dexterous robotics. Founded an high frequency trading startup during his PhD at Mila, acquihired by Equilibre Technologies.

Science

Cesc Cunillera - PhD in String Theory. Combined deep learning with fundamental physics to simulate complex cosmological model. At Equilibre, he trained with Simone the HFT simulator and model.

Xoronos

Deterministic Development Platform for Intelligent machines.

#SiliconValleySummit

Join us at **pnptc.com**

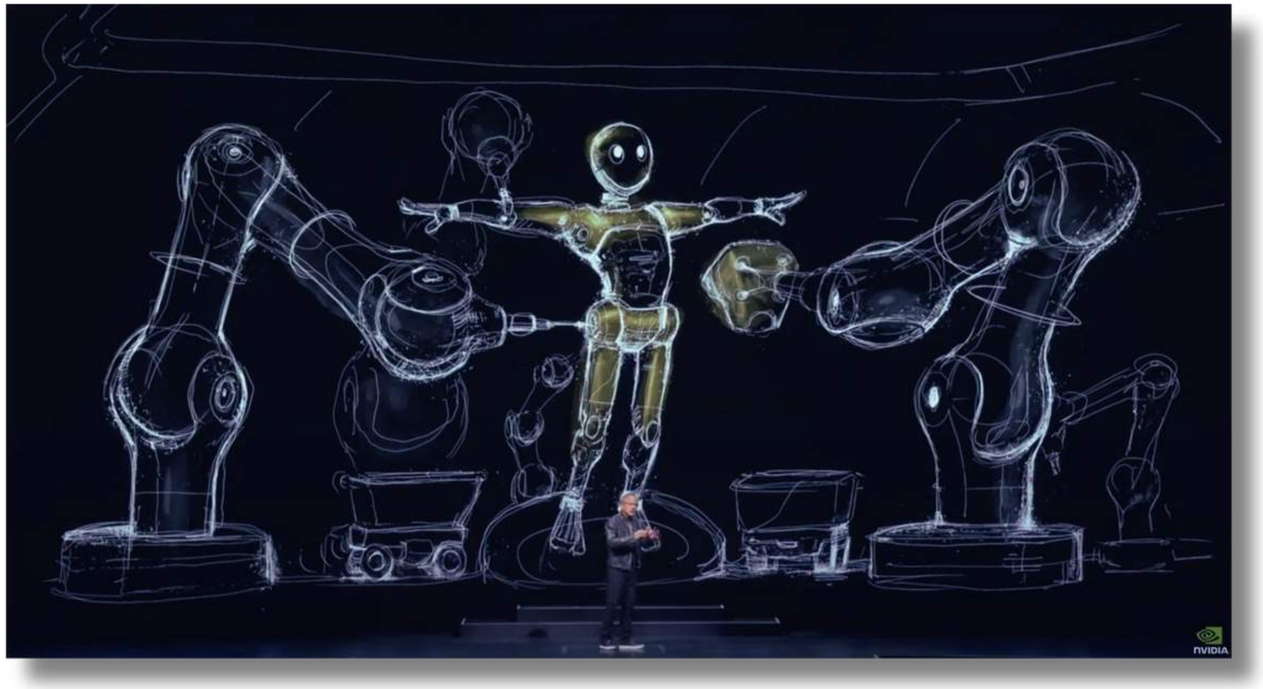

XRONOS

Deterministic Development Platform for Intelligent machines

Everything That Moves Will Be Robotic

But Infrastructure Falls Short

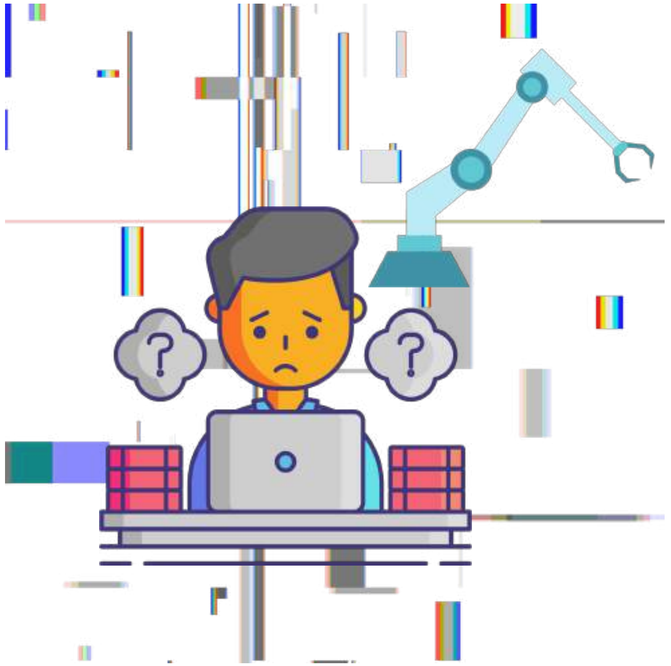

Scaling intelligence requires a dependable and observable system layer.

Kronos

The Hidden Bottleneck

Today’s System Layer is Complex and Fragile

- Months lost solving elusive bugs
- Current tools lack deep introspection
- No cross-environment reproducibility
- **Delays, cost overruns, failed pilots**

The cost of fragility compounds. Without introspection, every failure becomes a fire drill.

Meet Xronos

The First Deterministic Development Platform **for Intelligent Machines**

SDK

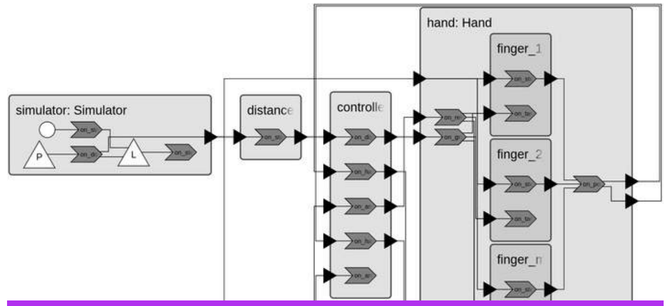

SDK

Software-In-the-Loop (SIL) simulation → **Hardware-In-the-Loop (HIL) simulation** → **field testing**

faster iteration—*what you simulate is what you ship*

DEEP OBSERVABILITY

DETERMINISTIC EXECUTION

SYSTEM VISUALIZATION

OBSERVABILITY DASHBOARD

Xronos unlocks reproducibility—accelerating problem diagnosis and development speed.

xronos

Where Xronos Wins

Supporting Teams Building Intelligent Systems

Debugging

Metrics & telemetry

Learning

Simulation

Caldo went from uncertainty about sensors to pilot-ready and equipped with deep observability in a matter of *days*—without Xronos it would have taken *months*.

xronos

Market Opportunity

Foundational Layer for a Software-Defined Future

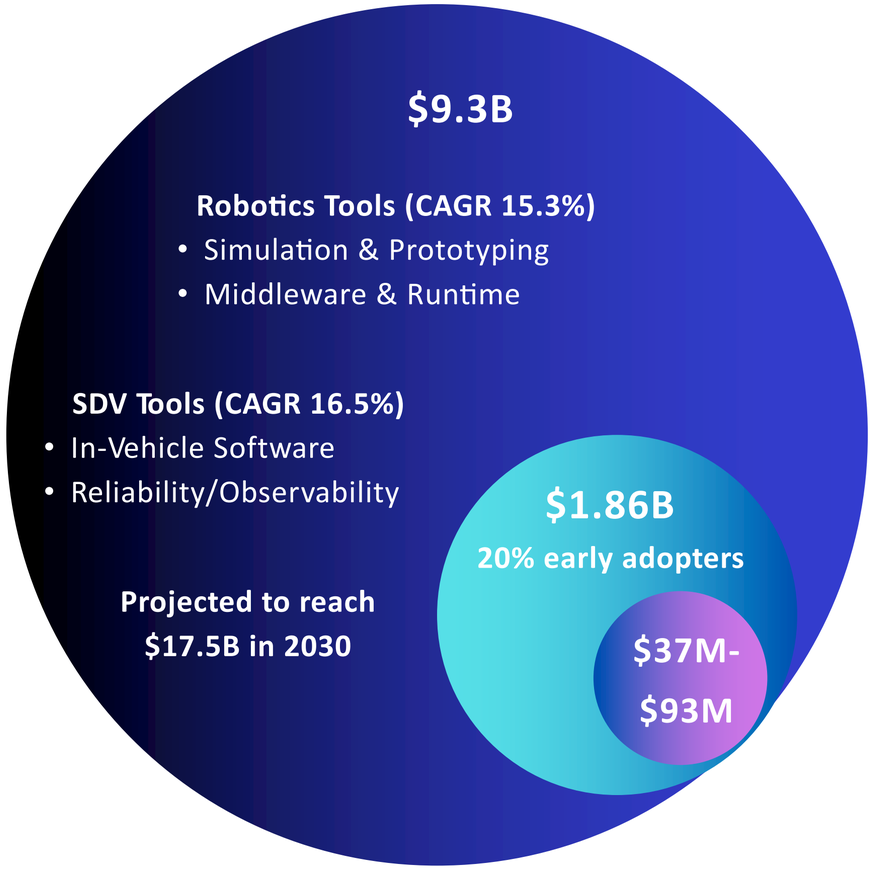

Growth drivers

- need for deterministic development in AMRs, cobots, and industrial systems
- SDV push and compliance mandates

Platform potential & TAM expansion

- reducing in-house software development
- applicable beyond robotics/SDVs (e.g., edge AI, digital twins)

SOM: realistic market share achievable with focused GTM (2–5% of $1.86B SAM)

Why We're Different

Reproducibility-First Dev Platform—Not Ops Tool

- Formant/VIAM
  - Monitoring & Management for Ops
- Foxglove/Rerun.io
  - Data Visualization for Devs
- **Xronos**
  - **Deterministic Dev Platform with Deep Introspection**

Silurian

Simulate the Earth

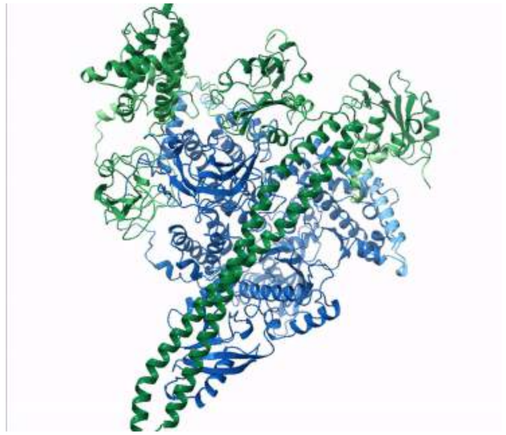

Jayesh Gupta

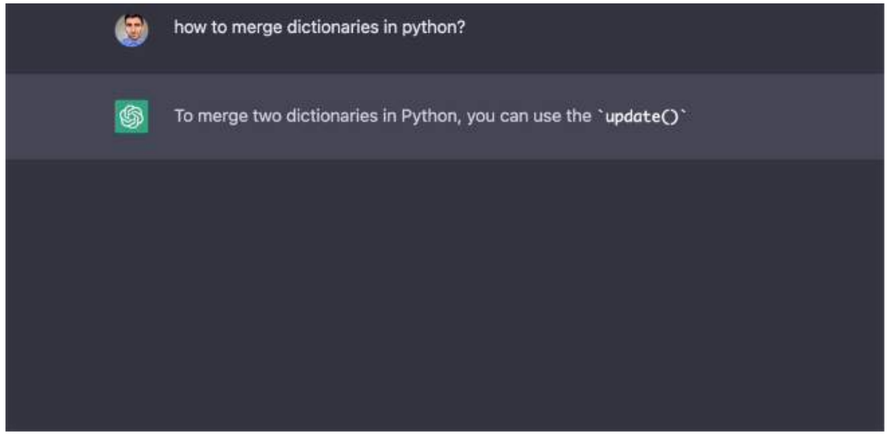

Co Founder & CEO
jayesh@silurian.ai

Hurricane Beryl caused 5B in damages
True Path
Government Forecast
Silurian Forecast July 1

Foundation Models are revolutionizing several fields

- Foundation models have completely transformed multiple fields.
- How it works:
  - *Pretrain* a very large model on a very large and diverse dataset.
  - *Finetune* your model to excel on specialized tasks.
- Foundation models are also changing Earth Simulations.

Why Foundation Models for the Earth System?

Exabytes of data

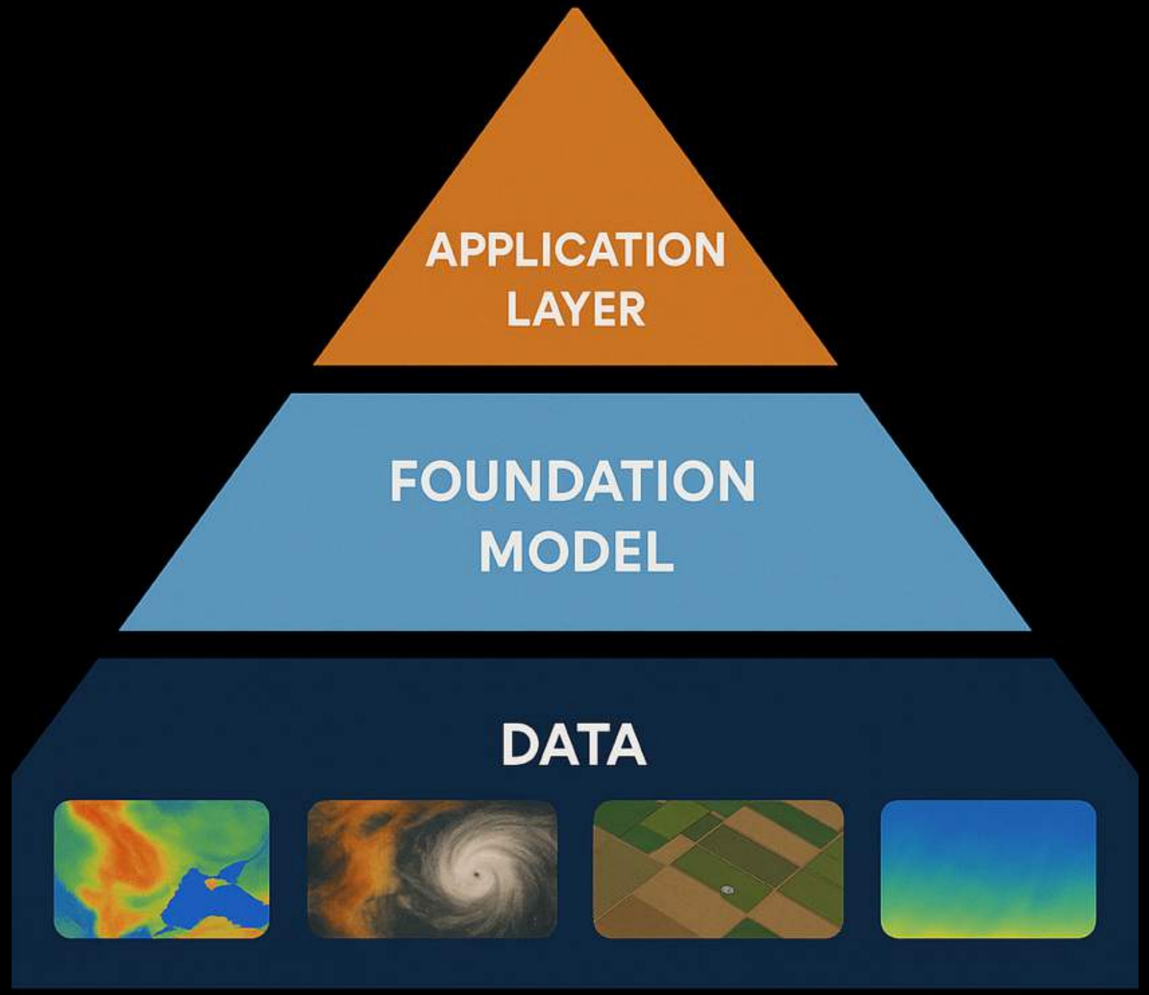

- Multiple scales and modalities
- Observations: satellites, weather stations
- Models: forecasts, analysis, reanalysis

Transfer learning opportunities

- Common physical principles
- Coupled interactions
- Effective in data scarce tasks

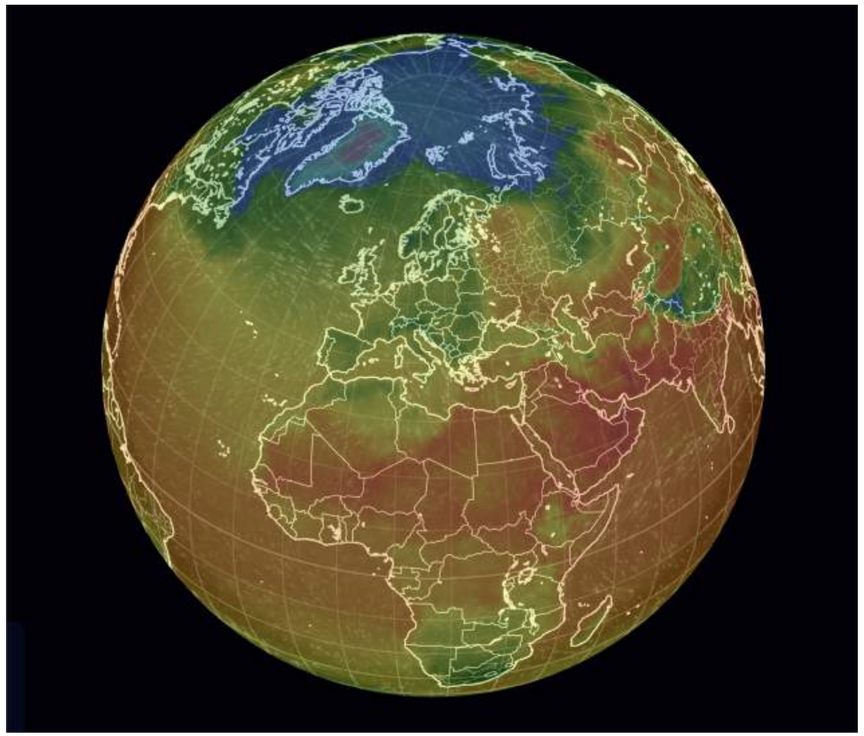

Compute and Infrastructure demands

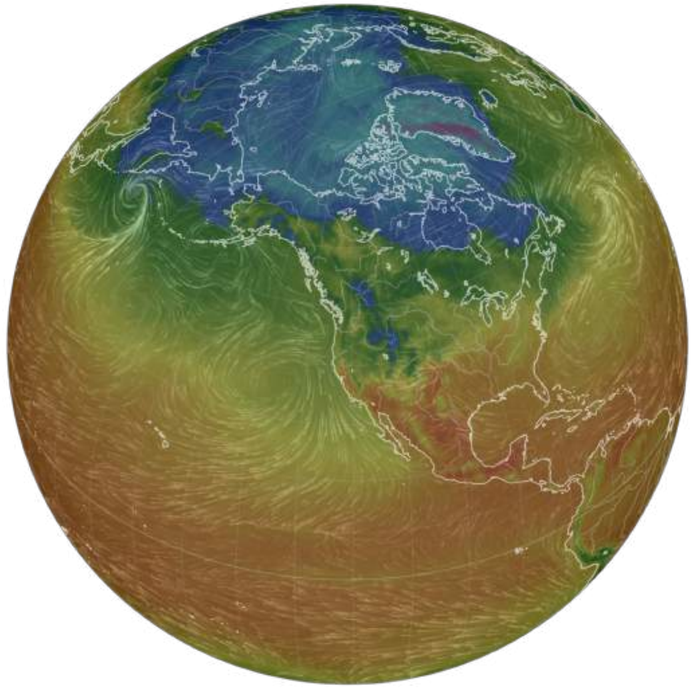

- Numerical models need node-hours on supercomputers
- AI models can run in minutes once trained

The old world

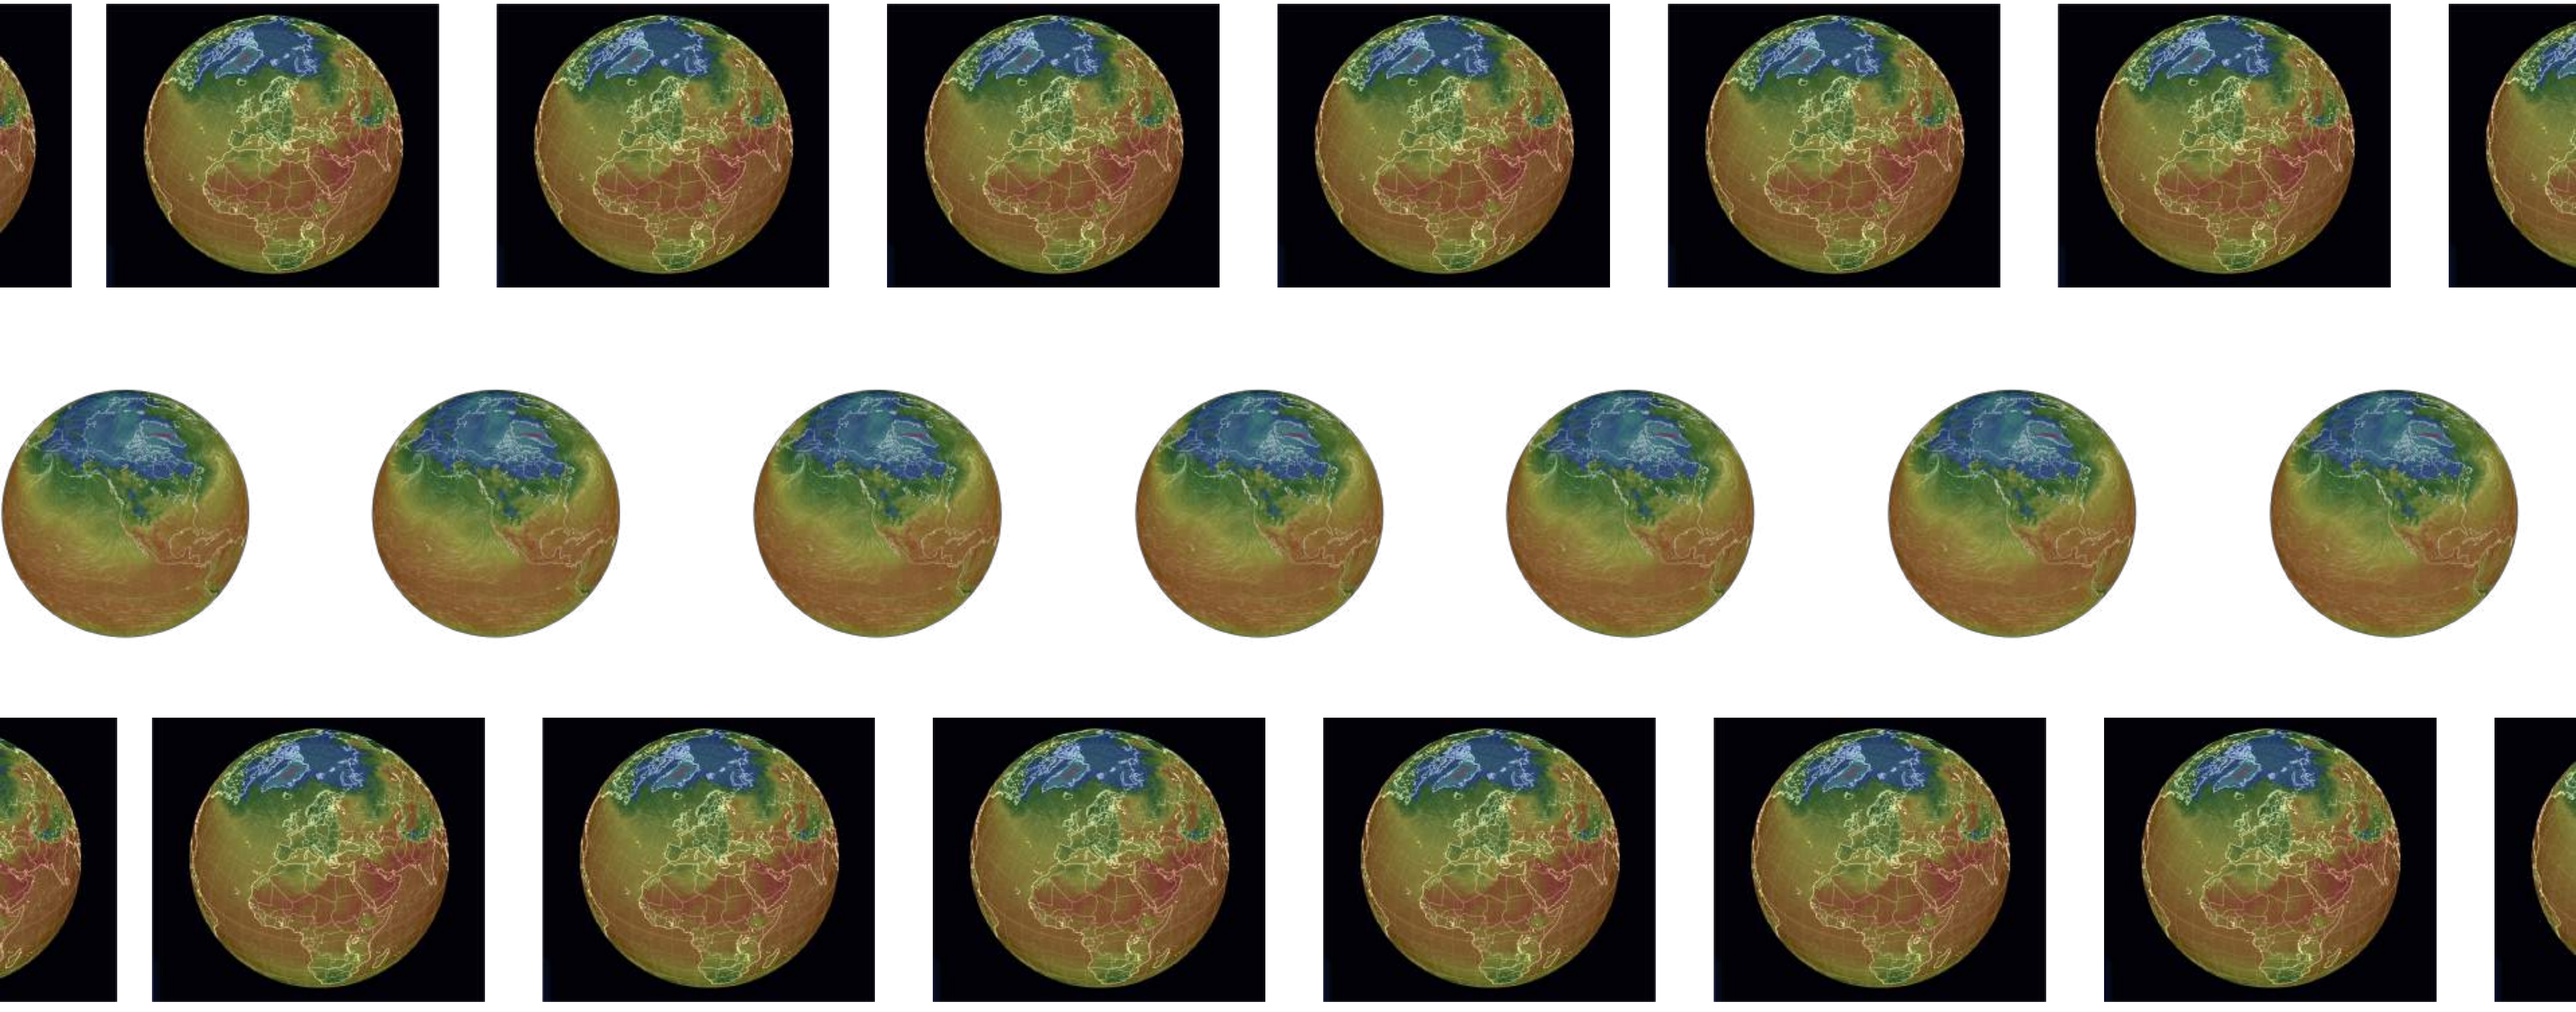

A handful of models from big government agencies, with a monopoly on data and super computing capabilities.

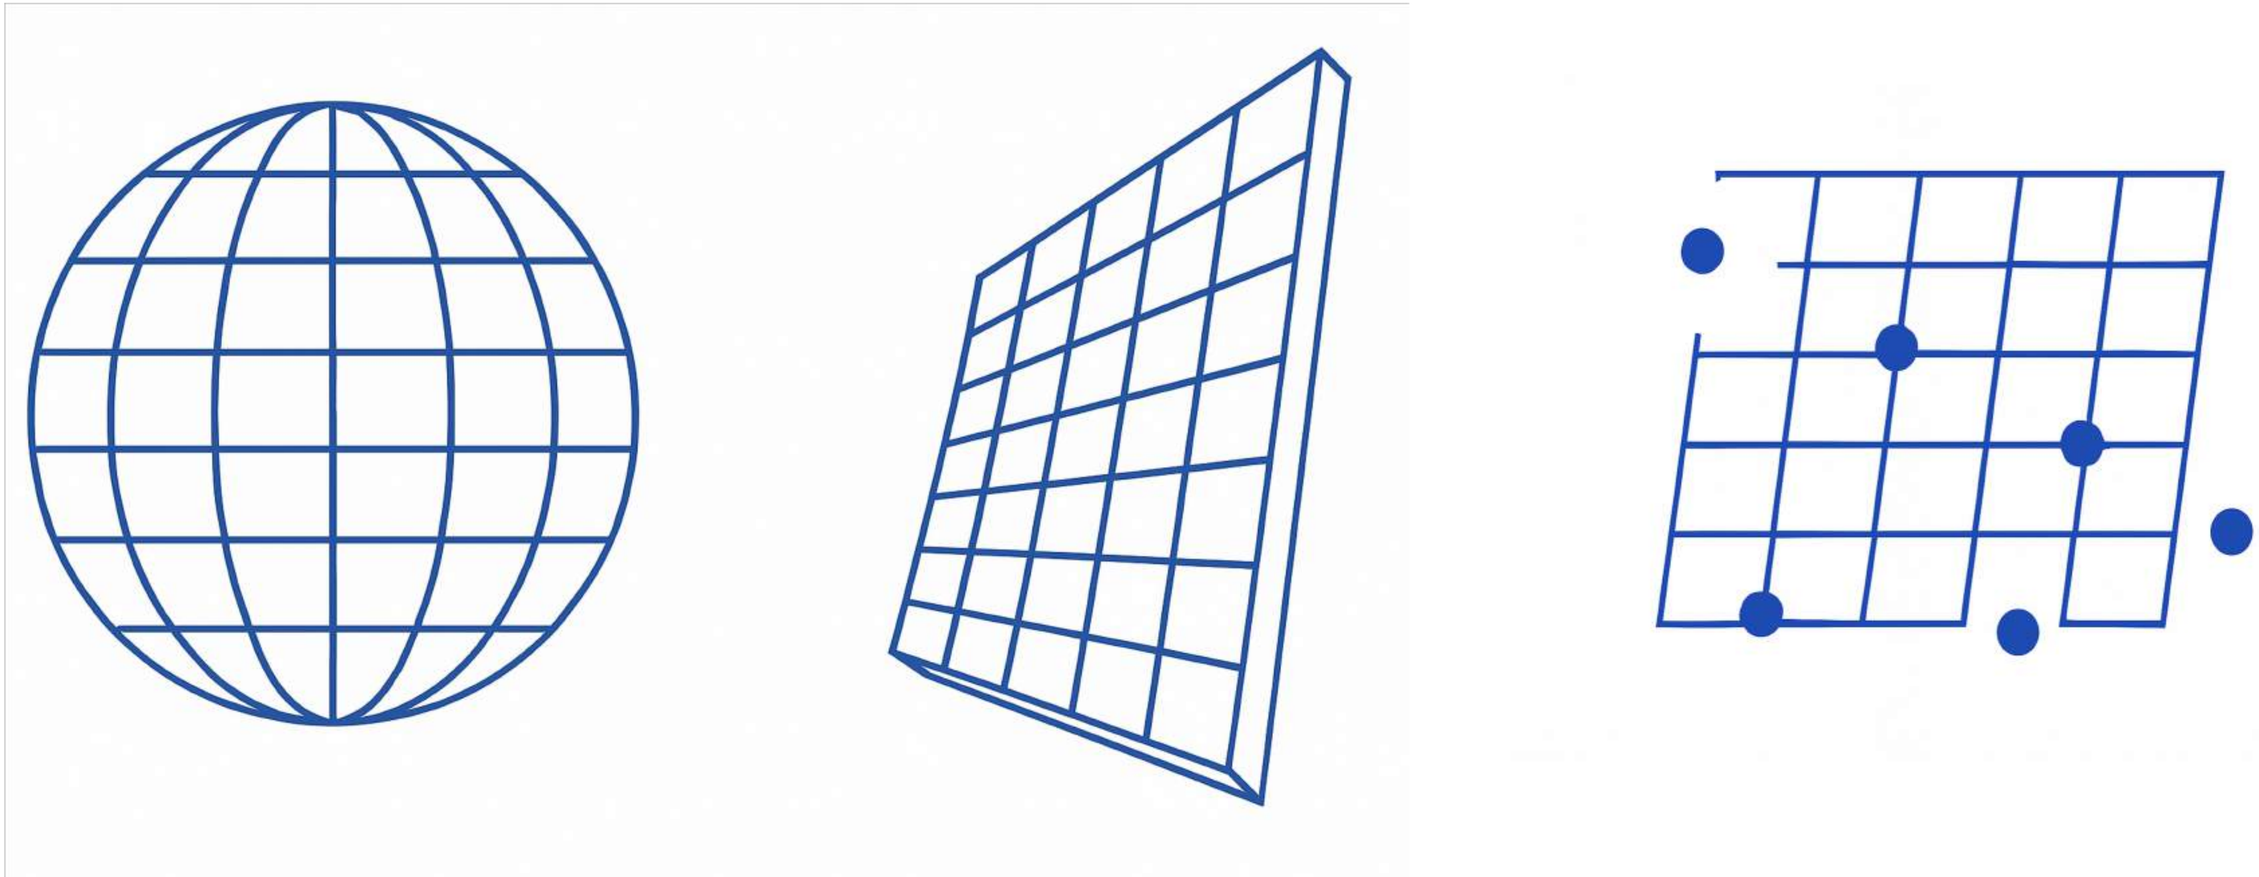

The new world: A zoo of models

Each government and business has its own weather model leveraging its private data.

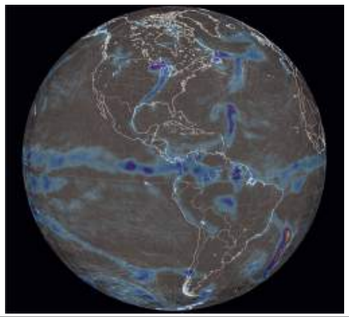

Transferring across scales

We demonstrated that GFT can learn to transfer knowledge across scales and even sparse data.

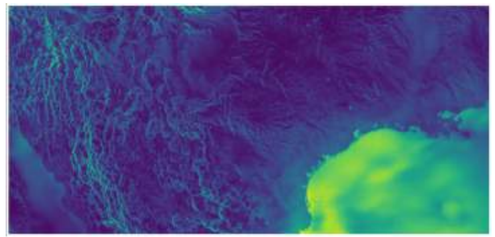

Generative Forecasting Transformer (GFT)

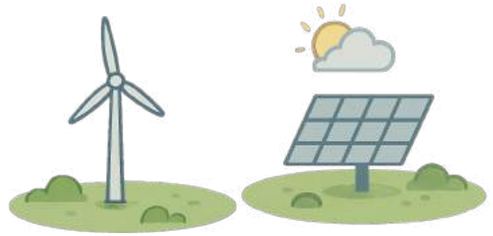

Global Weather Forecasting (10km)

Regional Weather Forecasting (3km)
