PLUG AND PLAY
FINTECH

Our Fintech platform is helping financial institutions to adapt to a new industry landscape defined by technology and innovation.

Present in over 10 locations across 4 continents, the Fintech vertical focuses on topics relevant to our corporate partners, such as

- **Financial Infrastructure** - modern core banking, payments, machine-to-machine transactions, loan origination, account opening, decision engines, embedded finance
- **Vertical AI for Financial Services & Financial Intelligence** - agentic workflows for middle-office automation, financial knowledge graphs, data ontologies, identity/trust layers, real-time hyper-personalization engines, AI-driven customer experience (CX) platforms
- **Financial Sustainability & Risk** - wealth management, debt/mortgage modernization, RegTech/compliance automation.

OUMI

Oumi is a platform for custom AI models in days, not months – delivering up to 10× lower production costs and more accurate, reliable applications.

#PNPTCSiliconValley

Join us at pnptc.com

Own the Intelligence. Own the Customer.

Build your specialized intelligence in hours. Compound it forever.

Private & Confidential

The inevitable strategic shift

2023 – Early 2025
Era of Rented Generic Intelligence (GPT, Claude, Gemini)

Low Quality - No Differentiation
Unreliable, shared intelligence, no differentiation

High Cost / Latency
10x larger models, costs balloon as use scales,

No Control
Limited privacy/security control
Forced migrations, terms of use changes

Late 2025+
Era of Owned Specialized Intelligence (Custom Open Models)

High Quality - Strong Differentiation
Reliable, proprietary data, compounding intelligence

Low Cost / Latency
10x cheaper, higher margins, cost advantage vs competitors

Full Control
Deploy in your trusted infra
Fully own AI destiny

Companies that continue to use generic intelligence will not be able to compete — they will be replaced

Private & Confidential

Introducing SWE-grep and SWE-grep-mini: RL for Multi-Turn, Fast Context Retrieval

By Ben Pan, Carlo Baronio, Albert Tam, Pietro Marsella, Mokshit Jain, Daniel Chiu, Swyx, Silas Alberti

TL;DR: We trained SWE-grep and SWE-grep-mini, fast agentic models specialized in highly parallel context retrieval. They match the retrieval capabilities of frontier coding models, while taking an order of magnitude less time. Available now in Windsurf's new Fast Context subagent!

VB

Intercom's new post-trained Fin Apex 1.0 beats GPT-5.4 and Claude Sonnet 4.6 at customer service resolutions

Carl Franzen
March 26, 2026

it runs at roughly one-fifth the cost of using frontier models

Private & Confidential

Why haven’t more enterprises done this shift already?

The barrier is not strategy. Its operational capability.

Effort

Building the Models

Takes months per use case
10s or even 100s of use cases

Maintaining the Models

Next model release makes my model obsolete?
Spend months again to update?

Expertise

Deep AI Expertise Required

Specialized AI talent is scarce
“None of us can do it” or “we only have a few that can”

Expertise Hard to Acquire

Specialized AI talent is scarce, hard to attain

lyzr®

Architect.new

The World's First Vibe Agent Builder Platform for Enterprise-Grade AI Agents

Siva Surendira - Founder & CEO, Lyzr AI

www.lyzr.ai

The biggest ***bottleneck*** in enterprise AI adoption is figuring out what to build.

01

Which agents should be in the pipeline?

02

In what order?

03

Which automation will bring highest ROI?

Case: A Large Bank

It took *8.5 months to ship one agent.*

BUSINESS USER
knows the problem

...is asked to ***wait.***

DEVELOPER
doesn't know the problem

...is asked to ***build the solution***

This is not a tooling problem.

This is the wrong loop.

Your business users know *more* about your business than *McKinsey* does.

So why are we letting consultants and boardrooms decide which AI agents your company should build?

Which is why we built

Architect.new

From your idea to a working agent. In one conversation.

01

DEFINE

Define the problem or the agent requirement.

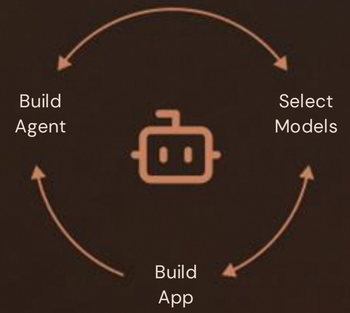

- Business Goal
- Requirements & Context
- Success Criteria

02

BUILD & SIMULATE

The architect builds out the agents, selects models, builds an app

- Agent Design
- Tools & Integrations
- Workflow Orchestration
- App Experience

03

TEST & IMPROVE

Run simulations, evaluate results, and continuously improve.

- Metrics & Evaluation
- Issue Detection
- Continuous Improvement

04

PRODUCE & OPERATE

Productionize the agent and continuously monitor in production

- Deploy to Production
- Monitor & Observe
- Operate & Optimize

Continuous Feedback Loop
Insights drive continuous improvement

INTRODUCING ARCHITECT

Same flow as Replit or Lovable. ***Except this one ships enterprise agents.***

lyzr®

Architect.new

Your business users know more about your business than *McKinsey* does.

Startup Presentation

Borderless.xyz

Borderless

Borderless is a global best execution network for stablecoin on- and off-ramps. Their platform connects traditional and emerging markets with reliable cross-border payments and treasury management, empowering fintechs, PSPs, and FIS to operate seamlessly at scale.

#PNPTCSiliconValley

Join us at pnptc.com

The network layer for global stablecoin payments.

Run multi-provider payment strategies with one API. For fintechs, PSPs, and institutions who have outgrown a single provider.

14+	95+	63+	SOC 2
Live Providers	Countries	Currencies	Type II

WHY NOW

Real adoption. Real regulation. Still early.

Stablecoins are financial infrastructure. The question isn't whether to use them. It's how you handle the complex interoperability with local fiat when you do.

Stripe → Bridge

October 2024 · $1.1B

The largest crypto deal in Stripe history. Stablecoin issuance and orchestration becomes a strategic priority for the world's largest payment platform.

MiCA · GENIUS

2024 · 2025

EU stablecoin framework in force. US GENIUS Act passed as legislation. Banks and PSPs can now build strategy with conviction.

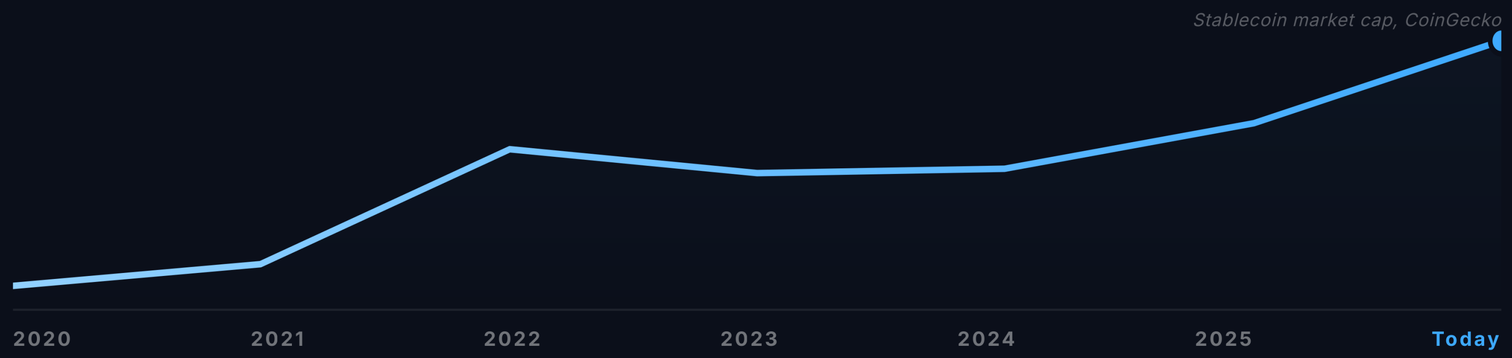

Mastercard → BVNK

March 2026 · $1.8B

A card network buys a stablecoin orchestrator. The infrastructure layer is now the strategic question. Every major rail is moving.

$300B+

stablecoin market cap onchain today. Up from $5B in 2020.

WHAT WE DELIVER

Stablecoins are simple.
Cross-border payment delivery is not.

Cross-border payments are slow, expensive, and tie up capital across markets. Stablecoins fix the rails. Borderless orchestrates everything around them.

01
GEOGRAPHIC REACH

Every corridor covered

Launch new corridors and add providers with a single configuration change. 95+ countries, 63+ currencies, local rails included.

02
RESILIENCE & FAILOVER

Every outage routed around

Provider outages and corridor freezes happen at scale. Failover to the next-best route. Payments keep moving.

03
PRICING & LIQUIDITY

Every payment priced

Quotes from every provider on every payment. Best execution, every time. Pricing transparency without negotiating corridor by corridor.

THE BORDERLESS STACK

Three layers. One platform.

Connectivity is the foundation. Operations is the engine. Intelligence is the differentiation.

LAYER 3
Intelligence

The data and insights no one else has.

Execution benchmarking, reliability scoring, provider health. Built from every network transaction.

SHIPPED Q1 2026

LAYER 2
Operations

The back office, automated.

Reconciliation, exception handling, compliance orchestration. One source of truth across all providers.

SHIPPED Q1 2026

LAYER 1
Connectivity

One API. Every provider.

Single API to 14+ locally-licensed providers across 95+ countries. Direct relationships preserved.

LIVE

LAYER 1 · CONNECTIVITY

One API. Every provider.

A single integration to 14+ providers. Payments route through licensed local counterparties, end to end.

POST /V1/WITHDRAWALS

```
"paymentInstructionId": "pi_8f2a…"
"amount": "5000"
"asset": "USDC_ETHEREUM"
"fiat": "BRL"
"country": "BR"
"rails": "PIX"
"paymentPurpose": "service_charge"
```

→ 201 Created · routed · 4s

Borderless.xyz routes. Provider selection, FX, settlement, ledger. Handled.

Bridge	US	Bitso	MX · BR · AR
Walapay	Asia · 30+	Yellow Card	Africa · 20+
Hercle	EU	Infinia	MX · BR · CL · 5+
KotaniPay	KE · UG · RW	Koywe	CL · CO · PE
Finity	EU	Trace	Brazil
BlindPay	CO	Capa	MX
Cobre	MX · CO	HoneyCoin	Africa

PLUGS INTO YOUR WALLET STACK — Fireblocks · DFNS · Privy · Turnkey · BitGo · Coinbase

LAYER 2 · OPERATIONS

The back office, automated.

Reconciliation, exception handling, compliance orchestration. One source of truth. Every provider.

Reconciliation

All settlements ledgered. Every provider, every txn, one view.

bridge	tx_8f2a…	$182,400	✓
walapay	tx_71c0…	R$ 1.24M	✓
yellow	tx_a09d…	₦ 84.5M	✓
koywe	tx_3e1f…	CL$ 92M	✓

Compliance Orchestration

Per-provider KYC and KYB, run from one flow. No duplicated work, no missed RFIs.

Bridge	✓ Cleared	KYB profile
Walapay	✓ Cleared	KYC + travel rule
Yellow Card	⚠ Review	RFI pending
Infinia	✓ Cleared	KYC profile

Refund Resolution

Five resolution paths. One workflow. Auto-triggered from settlement state.

01 **Inline** *Returned at quote ack*
02 **Async** *Routed back via provider*
03 **Provider balance** *Pulled from prefunded float*
04 **Source return** *Sent to origin wallet*
05 **Unsupported** *Flagged to ops queue*

Exception Handling

RFIs and failovers, auto-routed. Operators see queues, not surprises.

RFI · Walapay	→	HELD	RESOLVED	2m
Failover · Bitso	→	REROUTED	SETTLED	8m
RFI · Bridge	→	HELD	PENDING	14m
Refund · Yellow Card	→	ROUTING	RETURNED	31m

One source of truth. **Every provider. Every day.**

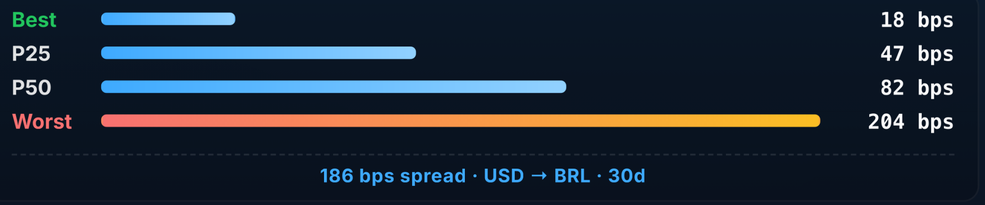

LAYER 3 · INTELLIGENCE

The data no one else has.

Every transaction in the network adds to the dataset. Cross-provider. Cross-corridor. Live.

FX Benchmark

Best vs worst execution across providers, every corridor. The price of opacity, made visible.

Execution Analytics

Latency, success rate, RFI hit rate. Every provider, every payment, one view.

99.4% SUCCESS	**8.2s** P50 SETTLE
2.3% RFI RATE	**47** CORRIDORS LIVE

Corridor Health

Provider scoring per corridor. Reliability and depth, live.

Expansion Insights

Where the network is growing fastest. Plan corridor expansion with data, not guesswork.

USD → ARS	↑ +287%
USD → VND	↑ +192%
USD → EGP	↑ +156%
EUR → KES	↑ +143%

DEMAND GROWTH · 90D · UNDERSERVED CORRIDORS

Built on every transaction in the network. **The advantage compounds.**

HOW WE'RE DIFFERENT

Three ways to solve this. One gives you the data layer.

A network, not a middleman. Your relationships, your economics, your data.

OPTION 1

Build It Yourself

Direct integration with each provider

CONNECTIVITY ✓ You build it. 3-6 months per PFI

OPERATIONS ✗ Build the back office yourself

INTELLIGENCE ✗ You see one provider's data

Months per integration. The maintenance never ends.

OPTION 2

Single-Provider Stacks

One PFI, one license, one balance sheet

CONNECTIVITY ✓ One integration

OPERATIONS ✗ Black box

INTELLIGENCE ✗ Their data, not yours

Easy until you outgrow it.

BORDERLESS.XYZ

The Network

Connectivity · Operations · Intelligence

CONNECTIVITY ✓ 14+ PFIs. 2 weeks to live

OPERATIONS ✓ Unified back office, your data

INTELLIGENCE ✓ Cross-provider, real time

A network of licensed counterparties. The only dataset across all of them.

PROOF

Trusted by teams moving real volume.

The platforms behind Samsung, IBM, and Shift4's stablecoin programs run on Borderless.xyz. A few we can name.

Bastion

Runs Samsung's stablecoin payouts. Expanding to emerging-market corridors in 2026. Came for corridor depth and multi-provider compliance.

DFNS

The wallet infrastructure behind IBM's Digital Asset Haven. DFNS Payouts is live in production. Built on Borderless.xyz from day one.

Cyclops

Stablecoin spinout from Shift4. Built on Borderless.xyz so enterprise PSPs move money cross-border without their own licenses.

BACKED BY amity ventures flourish

MEMBER OF mastercard START PATH

Borderless.xyz

Melow’s Offering

We do three things really well...

Connect

- Our AI Brain plugs into your existing stack
- Builds a living org memory: context graph across data, documents, dashboards, and operational systems
- Makes your current stack more valuable

Execute

- Agents do the work end-to-end - not just surface insights, but act on them
- Creates new workflows that didn’t exist before, for every business team
- Frees teams from repetitive work

Prove

- Auditable and explainable decisions & assumptions
- Tailored deployments
- SOC 2 and ISO 27001
- Multi-tenant, permissioned, governed: built for enterprise environments from day one

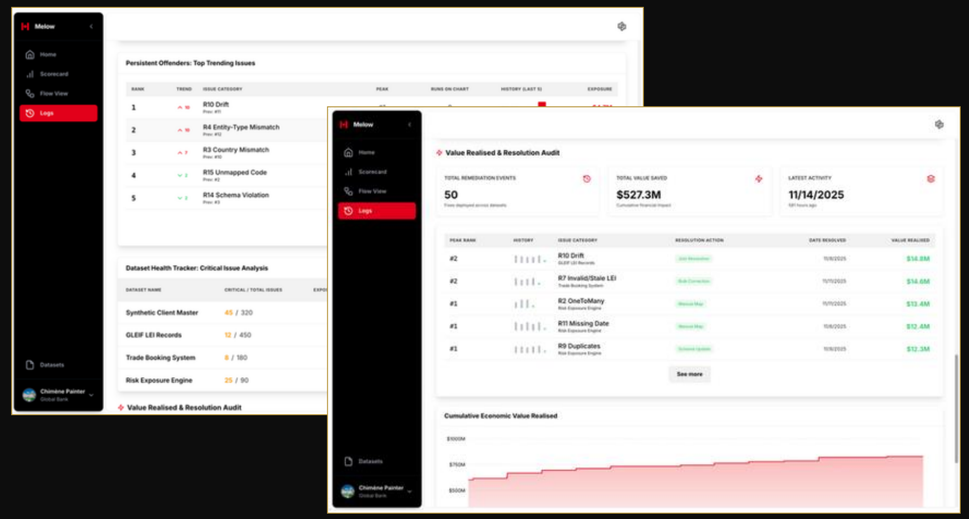

TIER 1 - GLOBAL INVESTMENT BANK

From fragmented data joins to unlocking £100M+ in capital efficiency

Global Tier-1 investment bank · Complex multi-division data estate · Group Operations, IB and Unified Client View

THE PROBLEM

- Critical data relationships across systems are unvalidated, creating hidden inconsistencies and billions in financial exposure
- Manual and unreliable entity matching across internal and external datasets slows down operations and increases risk
- Limited visibility into data quality issues forces conservative regulatory treatment, leading to significant capital over-allocation

THE SOLUTION

- Melow deployed a unified AI-driven data layer, structuring and validating relationships across domains in real time
- Automated join integrity, lineage, and governance, removing manual reconciliation and increasing trust in data
- Enabled teams to query, validate, and act on data instantly, with full traceability and auditability
- Improved RWA accuracy with validated data relationships

VALUE CREATED

£75M–£100M

Annual capital efficiency unlocked

£10M–£17M

Avoided / Internal build cost

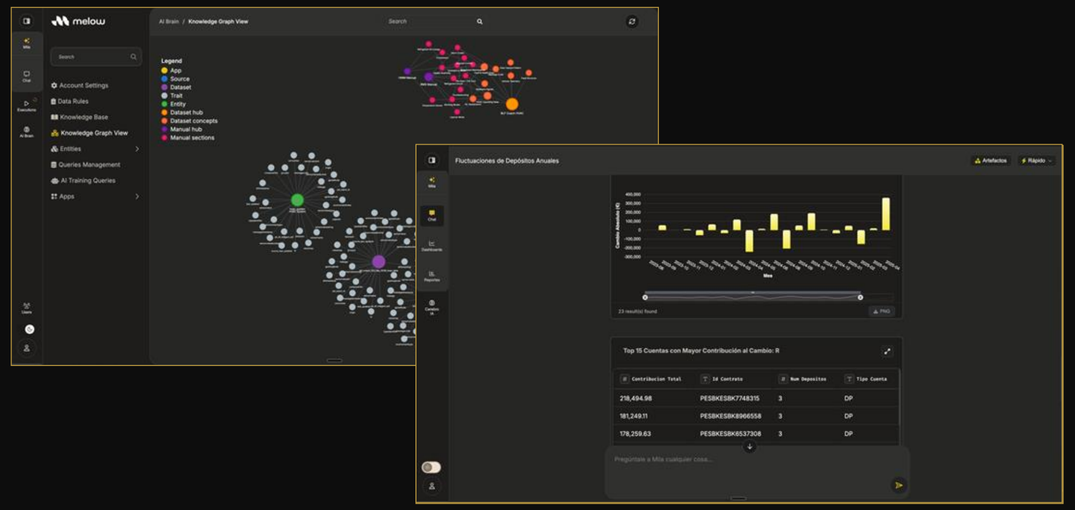

LEADING EUROPEAN BANK

From 800K undocumented legacy tables to a an AI-ready data estate.

Tier-1 Bank · Complex on-premises data environment · Multiple production domains with no unified semantic layer

THE PROBLEM

- 800,000+ legacy data tables with no documentation, no context and no way to make them usable for AI or analytics
- Data teams spending months manually cataloguing and mapping relationships, with no consistent governance layer
- Every AI initiative blocked at the starting line - LLMs, chatbots and automations all impossible without a clean data foundation

THE SOLUTION

- Melow's AI Brain deployed fully on-premises, automatically cataloguing and contextualising 800,000+ tables across four production domains with no manual pre-modelling
- A governed semantic layer built automatically, connecting all data sources and making them ready for any downstream AI use case
- Chatbots, LLMs and automated reporting unlocked in weeks, not years - all within Bankinter's own secure infrastructure

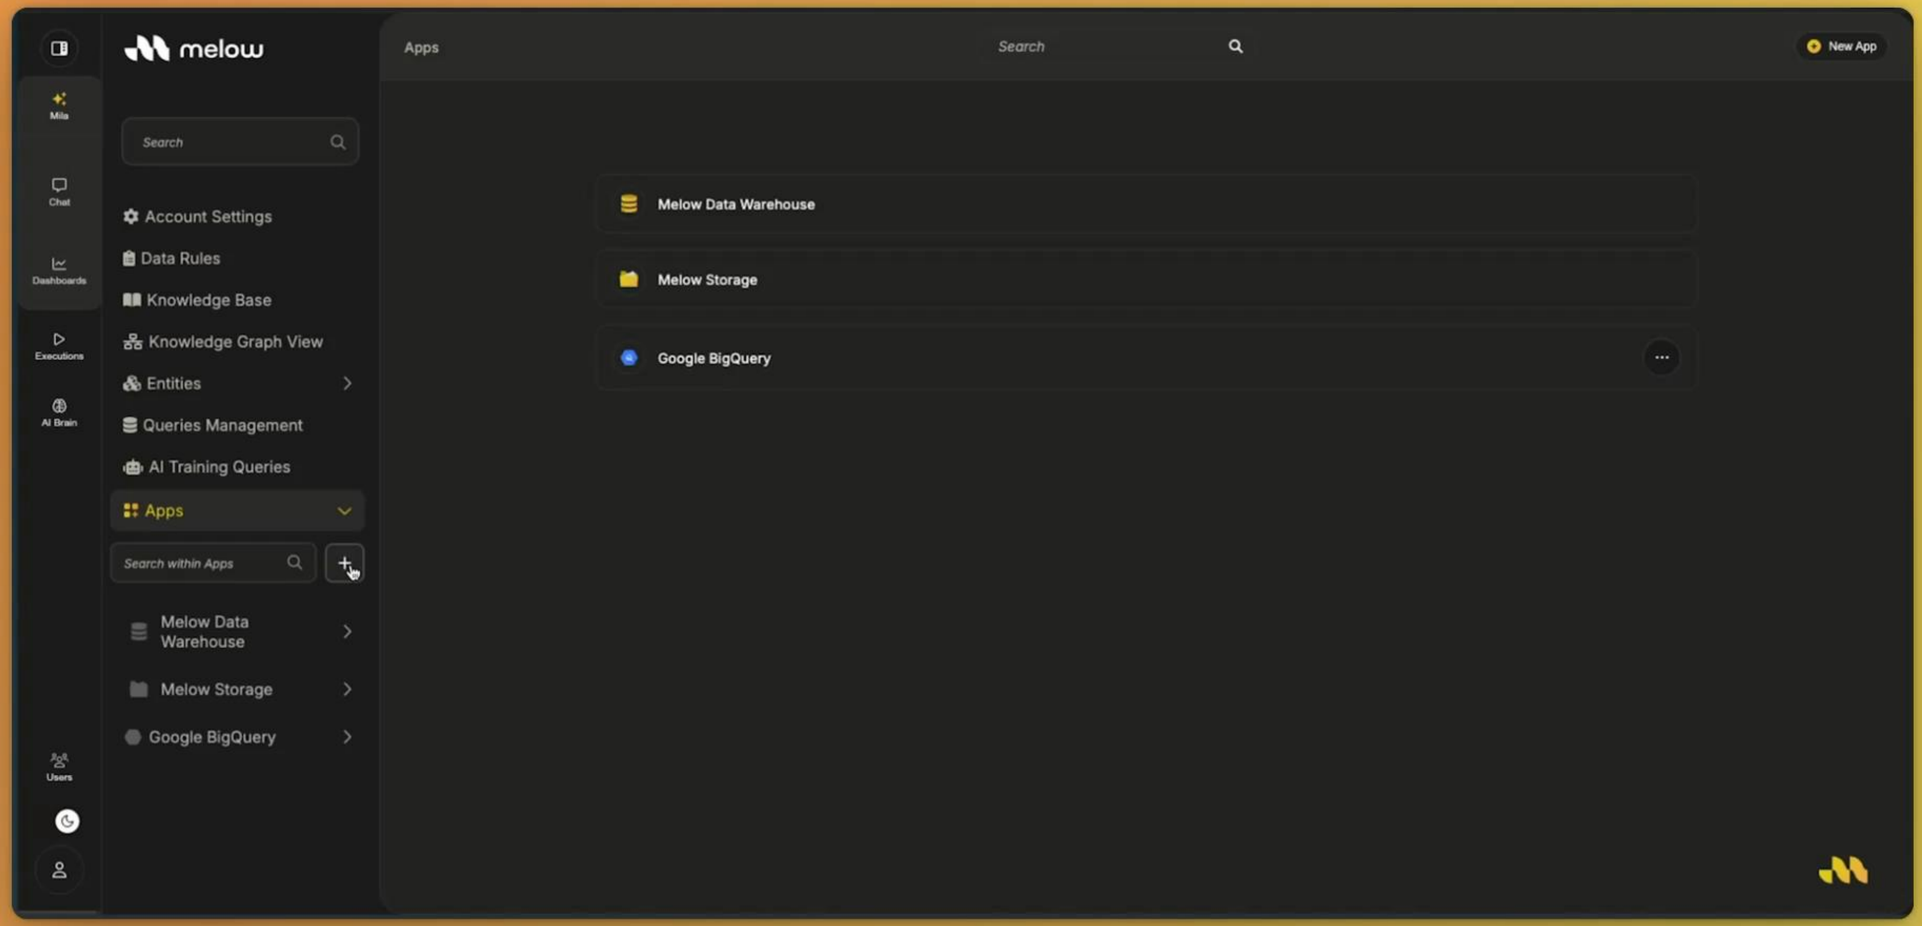

VALUE CREATED

€4.3M

Projected cost savings

2 years

Time saved vs planned consulting process

The Enterprise AI Governance & Trust Platform

Activating Generative AI Governance in Financial Services

The Challenge

As one of the world's most trusted financial technology companies, Mastercard faced growing complexity in managing AI risks across thousands of models, vendors, and global operations. With the rise of Generative AI, new challenges emerged—unknown reliability, evolving risk profiles, and unprecedented accessibility that spanned every function from marketing to fraud detection.

Manual risk assessments and spreadsheet-based reviews couldn't keep pace with the volume, velocity, and variety of Generative AI use cases emerging across Mastercard's ecosystem. The company needed a unified governance framework to ensure innovation could scale responsibly—without compromising security, compliance, or trust.

"Using the Credo AI Platform, Mastercard is able to manage AI risk and responsibly implement generative AI – with better speed and scale than ever before."
Andrew Reiskind, Chief Data Officer at Mastercard

The Solution

Mastercard partnered with **Credo AI** to operationalize a **scalable, secure, and automated system of Generative AI governance** across the enterprise. Together, the teams built a robust governance infrastructure that combined speed, transparency, and accountability. Key initiatives included:

- **AI Registry and Automated Use Case Intake**
  Mastercard used Credo AI to establish a centralized AI Registry that tracks all Generative AI projects, from internal prototypes to external vendor solutions. Custom intake workflows helped product and use case owners capture evidence, classify risk profiles, and automate routing for review—aligning oversight with Mastercard's internal risk frameworks and external regulatory requirements.
- **Cross-Functional Review and Approvals:** Credo AI's automation streamlined collaboration between Mastercard's AI Governance, Security, Legal, Privacy, Brand, and Technology teams. Reviewers received automated notifications, submitted feedback directly within the platform, and maintained a persistent audit trail for every use case. This accelerated approvals while ensuring accountability and traceability across hundreds of stakeholders.
- **Vendor Portal for Third-Party AI Compliance:** Recognizing that Generative AI often involves external models and APIs, Mastercard deployed Credo AI's Vendor Portal to manage third-party risks. Vendors could now submit evidence directly into the platform, while Mastercard's governance team validated and tracked compliance continuously. This portal became a single source of truth for managing AI vendor risk at scale.

The Impact

Within 120 days, Mastercard operationalized Generative AI governance at scale across business units, regions, and vendors.

- **Accelerated AI approvals** by automating reviews and risk categorization.
- **Unified oversight** across Legal, Security, and Privacy through a single platform.
- **Improved compliance posture** by aligning processes with global frameworks such as the EU AI Act and emerging U.S. standards.
- **Reduced vendor assessment time** through automated evidence collection and validation.
- **Enhanced executive visibility** into all Generative AI use cases worldwide, enabling confident and compliant AI innovation.

By embedding governance directly into Mastercard's innovation workflows, Credo AI helped the company scale Generative AI responsibly, protecting customer trust while unlocking new possibilities for intelligent payments and enterprise efficiency.

credo ai

The Critical Questions Every Enterprise AI Leader is Asking

Single View of AI in My Enterprise

Who in your organization has complete visibility into every use case (3rd party, 1st party & embedded AI

Adopt Third Party AI Fast

How can we adopt AI fast for top linke, productivity and innovation gains?

Scalable AI Risk Management

How can we confidently scale our AI initiatives while managing AI risks ?

Regulatory Compliance

Are our AI initiatives read for the wave of emerging Regulations & Standards?

credo ai

Trusted By The World's Most Demanding Governments & Fortune 500 Enterprises

To Adopt AI and Agents. To Manage Risks. To Be Compliant.

Madrigal Pharmaceuticals

Formalizing AI Governance Across Biopharma Operations

Top AI Use Cases:

Clinical Analytics, Bioinformatics, GenAI Summarization

Biggest wins:

- ✓ **10+ high-risk AI cases surfaced in Month 1**
- ✓ Coverage expanded across 5 AI domains
- ✓ Automated regulated AI assessments
- ✓ Unified review across Legal, Compliance, Privacy, Data Science, Procurement

Chevron

Unifying AI Governance Across 500 AI Use Cases, and Beyond

Top AI Use Cases:

Predictive Analytics, Industrial Operations, GenAI Content

Biggest wins:

- ✓ 500+ AI use cases centralized into a single inventory Operational governance across 180+ countries
- ✓ Switched from spreadsheets to **automated assessments in <3 months**
- ✓ Reduced approval friction across security and compliance

cisco

Standardized, scalable and risk managed faster AI Adoption

Top AI Use Cases:

Text Analytics, People Analytics, Employee use of Generative AI.

Biggest wins:

- ✓ Adopt Gen AI Faster
- ✓ Increased customer trust unlocks more sales
- ✓ Cost savings from centralized governance
- ✓ Faster third party risk management
- ✓ **Emerging need to govern AI agents**

One Platform for Complete AI Oversight

What our platform and Advisory do

Centralized AI Inventory - Every AI use case, models, AI agents, vendors in one unified view

Automated Risk Assessment - for bias, compliance gaps, societal impacts, harmful content

Audit-Ready Compliance - Pre-built frameworks (EU AI Act, NIST RMF, SR 11-7 and world-wide AI regulations)

Third-Party AI Governance - - Vendor risk management for ChatGPT, OpenAI, etc.

Why it matters

- **60% faster** AI Use Case validation cycles
- **Reduce compliance costs** through workflow automation
- **Proactive risk mitigation** before regulators knock
- **Accelerate AI deployment** with built-in guardrails

From AI chaos to AI confidence—at the speed regulators demand.

Global AI deployments in production

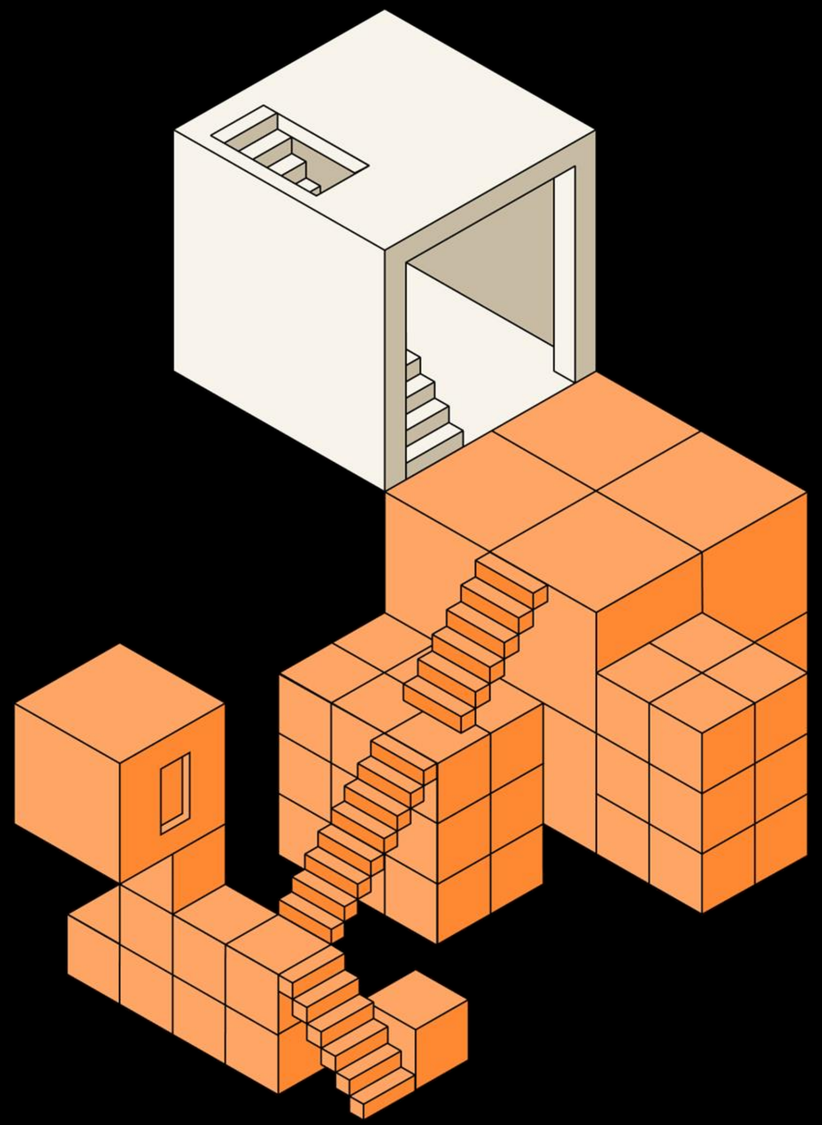

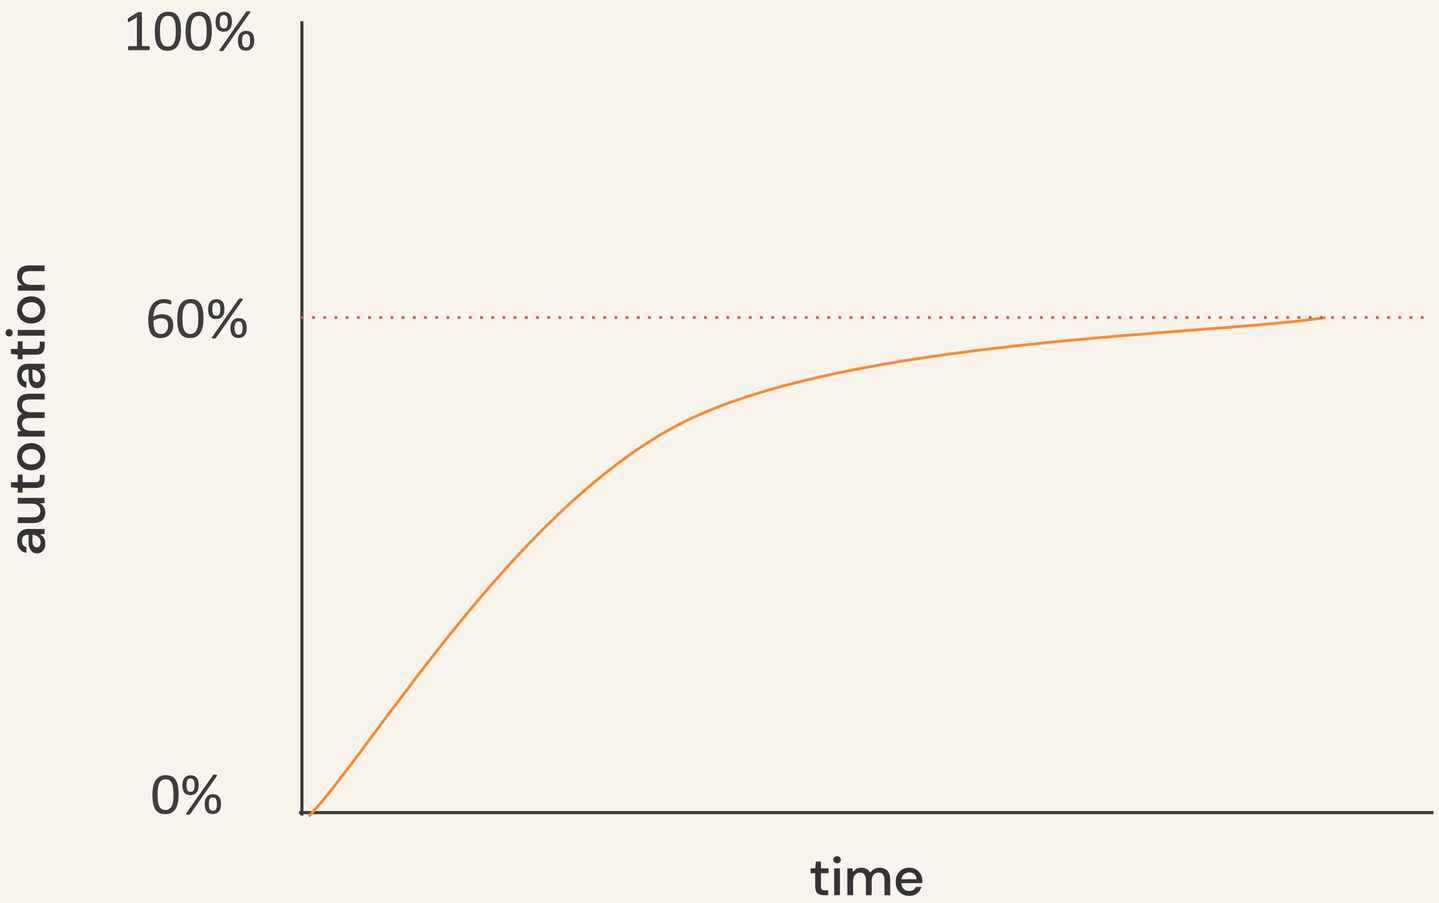

Financial services support is unique.

It requires a purpose-built approach.

Generic agent builders max out at 60% automation rates for complex customer ops

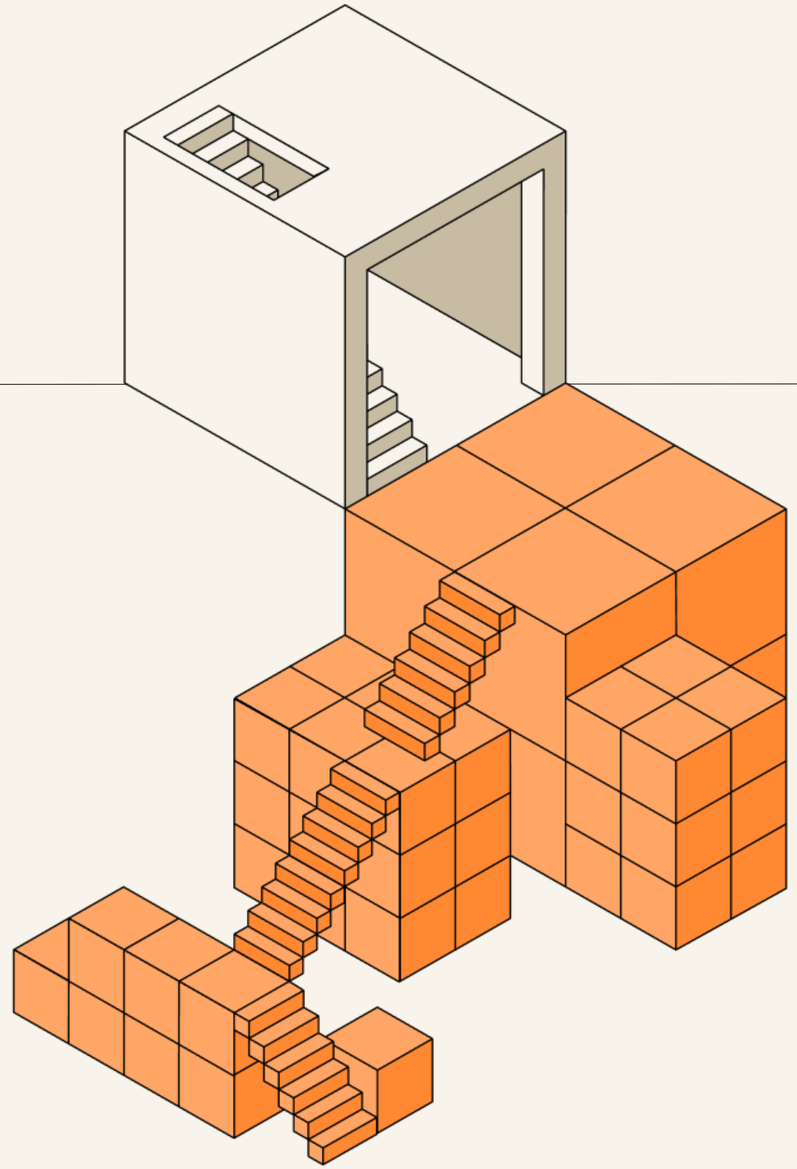

Generic agent builders are enough for L1 work

L1 Support

- Where’s my order?
- I need to make a return
- I can’t log in

Finance is different.

- Strict regulations
- Specialist areas
- Low risk appetite

L2 & L3 Workflows

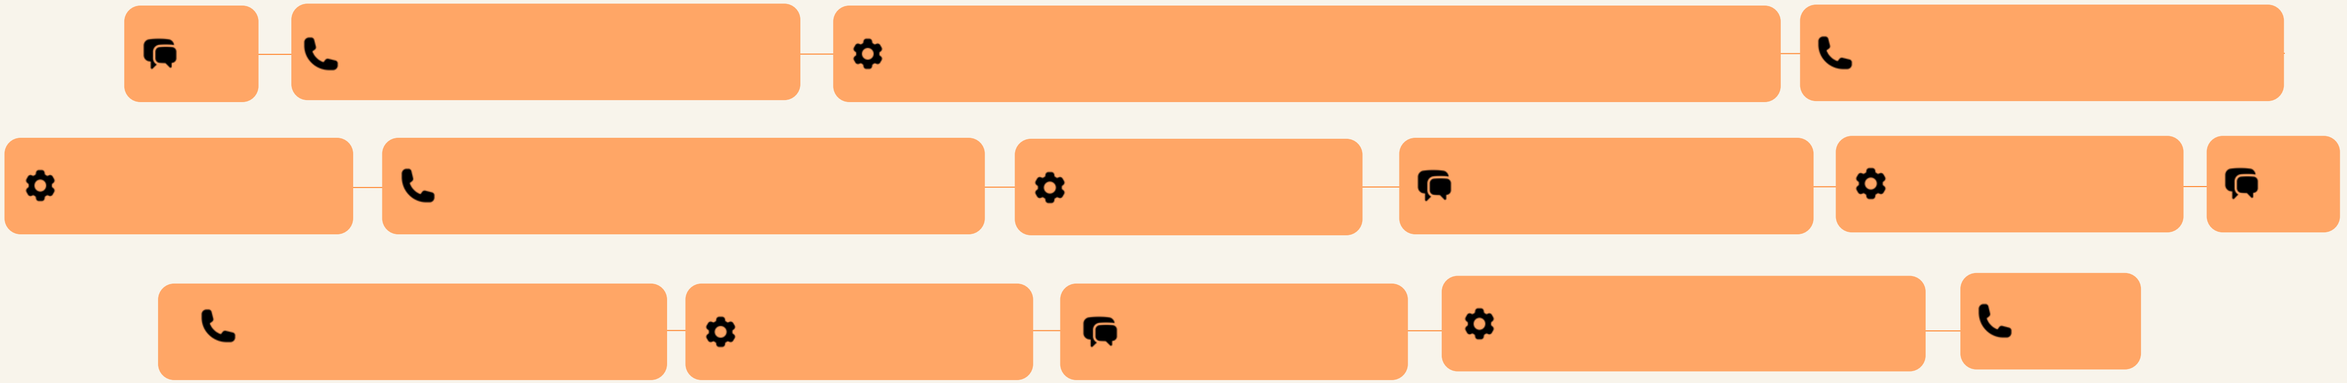

- Complaints
- Disputes
- Collections
- Claims
- Fraud investigations
- Financial vulnerability
- Onboarding
- Bereavement

L1 Support

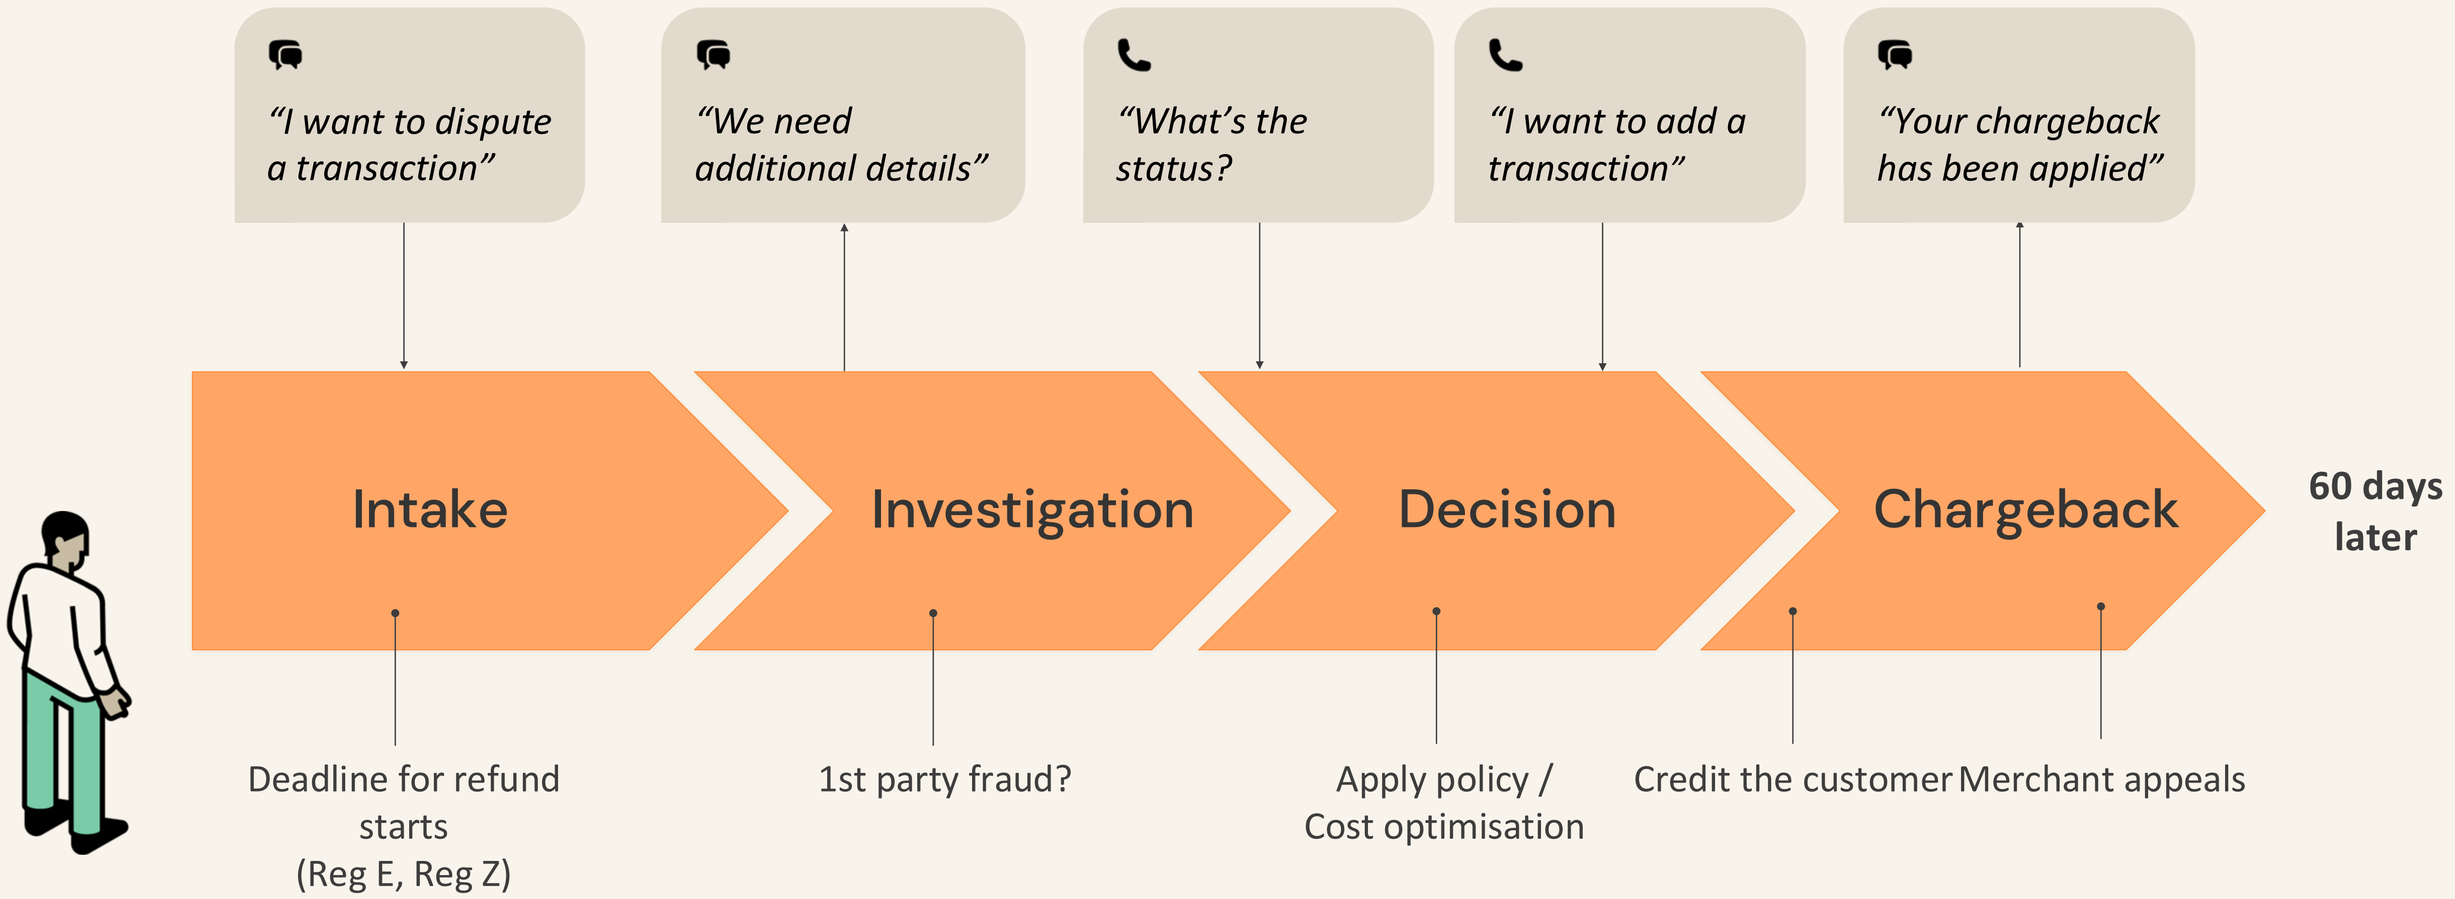

Discrete interactions

L2 & L3 Workflows

Long-running processes

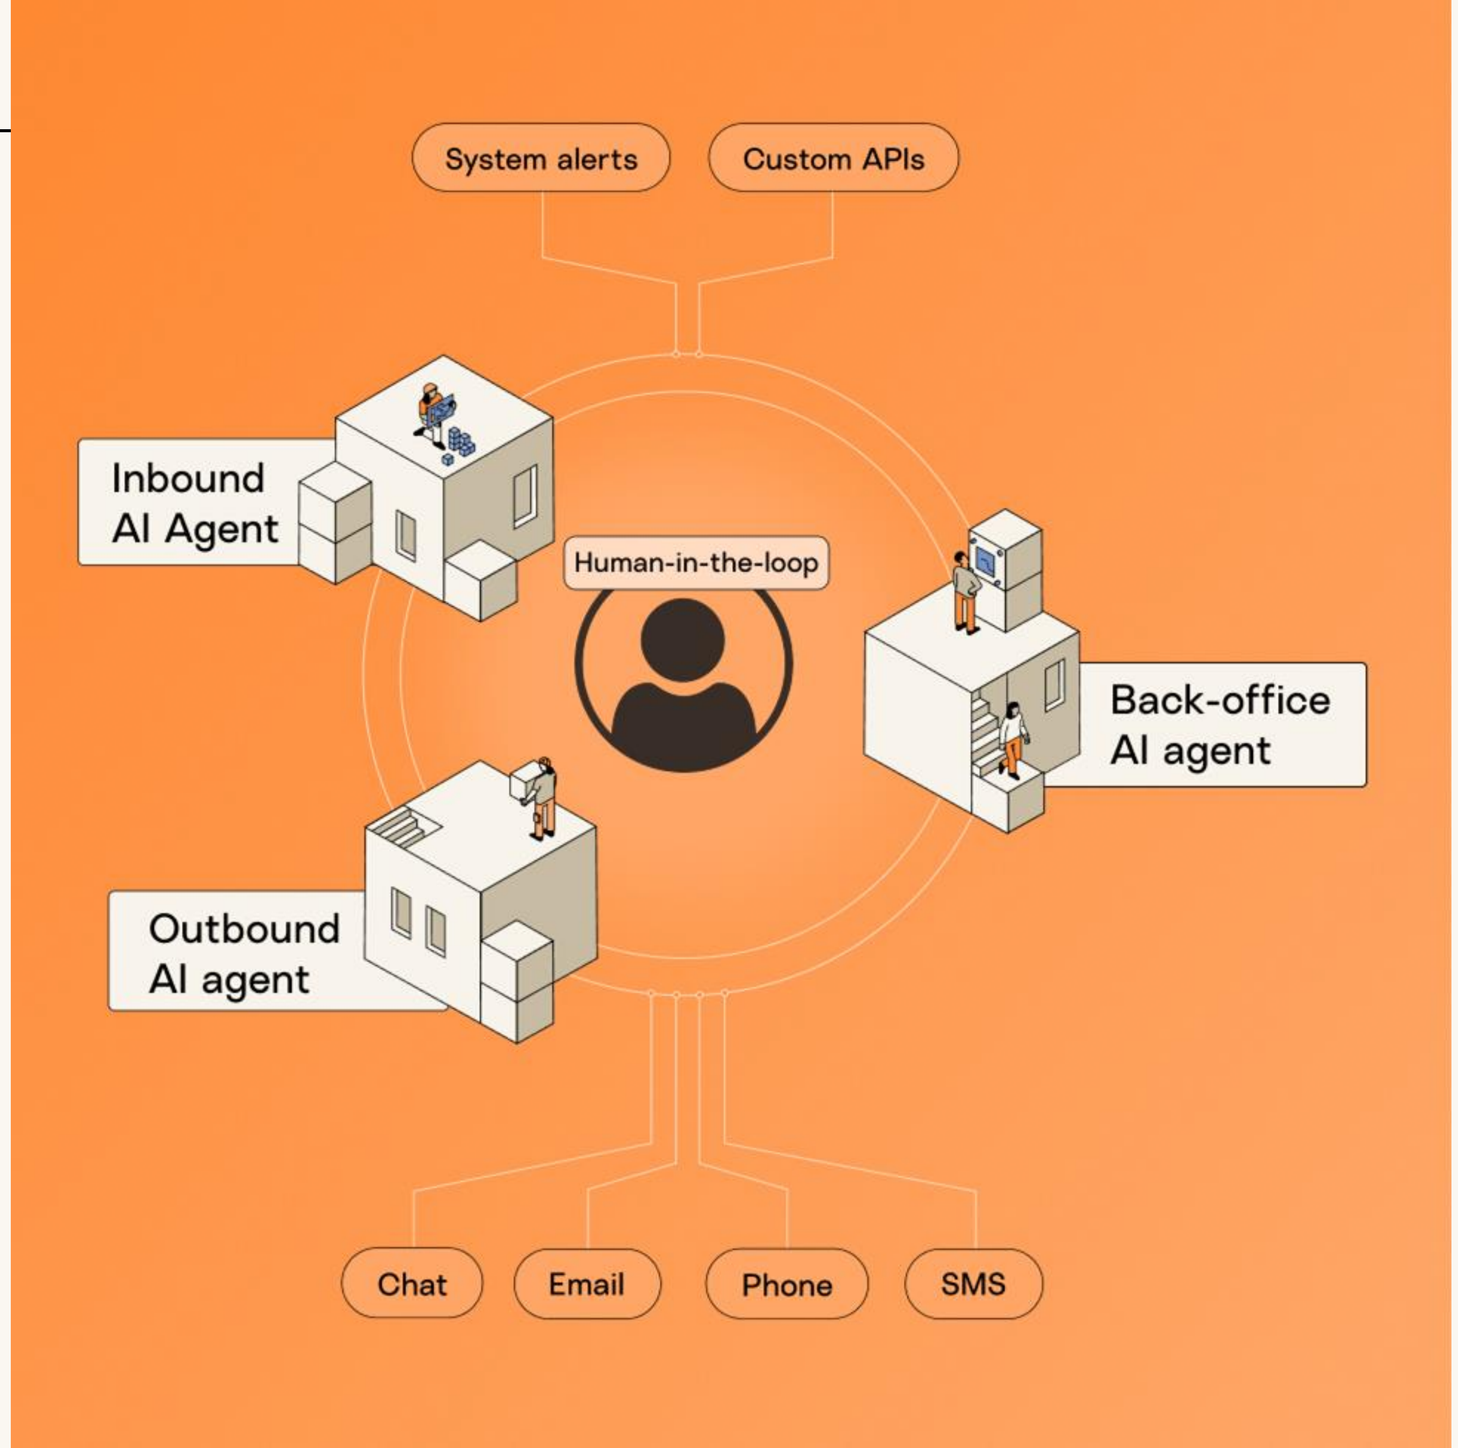

Typical disputes lifecycle

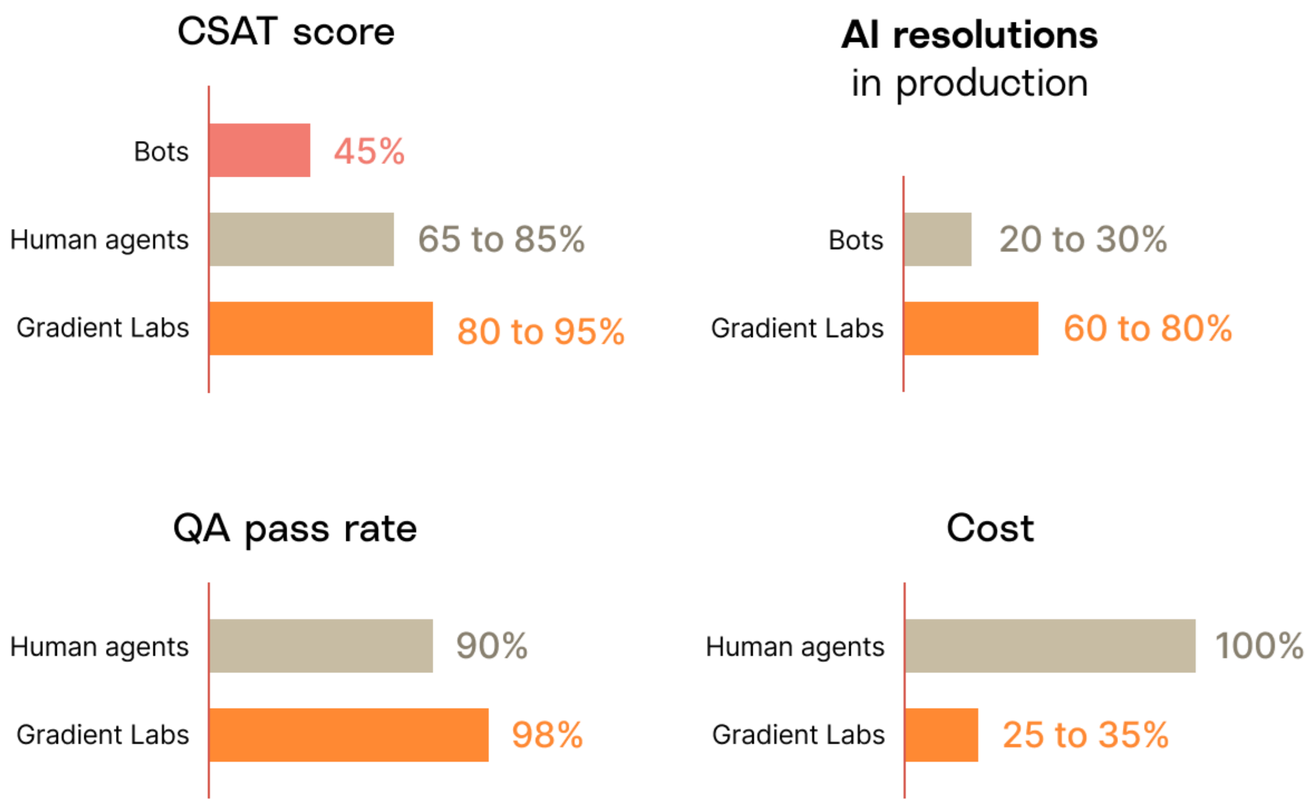

What we do

Automate your entire customer support operation

Customer Proof

Better than the best human agents

SteadyPay

ForeStrat.AI

The AI-native platform for investment operations.

anand@forestrat.a

jacob@forestrat.a

HĒDQÑCŒPÖ ÑŌPÎ ŐÑØVPÒŎŌCŒČBĆ

Our Conviction:

Future of Investment Operations & Technology is Agentic, human-in-the-loop, unified platform.

Two Functions. Ripe for Disruption.

Data Platform

Every firm builds the same pipelines. From scratch. Every time. Redundant. Expensive. Fragile.

Trade Operations

Duct-taped tools. Manual exceptions. Zero AI nativity.

Ì ÑMÖ ÆÉ Þ ÒÕÞ Ä ÊŔÒÞÑÑ ĞÒŌPÑŃO Ĭ PIVØPÞ Ő

Anand Chavan, Co-Founder, CEO

Bootstrapped Foreseer as solo founder from 2018-2022. Foreseer is an AI powered financial information extraction platform. Acquired by S&P Global in mid 8 figures.

Jacob Kaippallimalil ,Co-founder, CPO

MD → Morgan Stanley · BAML · UBS. Head of Data & Quant, Schonfeld. 25+ years at cutting edge of quant trading / research / data. Quant PM managing 70 people, ~$1B revenue.

The Team

Foreseer's core team ~ 12 engineers. 10+ years together.

Deep domain experience in financial services technology. Working with AI / LLM since 2018 at cutting edge of data platform and operational tooling.

3

Paying Clients

>$30B

Combined AUM

$1.5M

Current ARR

$3M

Ï ÇÎØÕÕÑŃPÑŇ ĖĪĪ

All founder-led sales. Pure product-market fit.

Pipeline

- Expect to hit $10M+ ARR with warm intros / network alone in 18–24 months
- 3 conversations in contract negotiation stage. These deals should double our ARR
- Existing clients will add $1.5M+ ARR annually

Market Opportunity

$2B–$6B market replacing existing spend in ~2000 firms.

Stable Sea

Stable Sea

Stable Sea provides seamless, compliant, cost-effective stablecoin offramping solutions, enabling businesses to bridge the gap between digital and traditional finance and unlock new opportunities.

#PNPTCSiliconValley

Join us at pnptc.com

STABLE SEA · TREASURY PLATFORM

Stable *Sea.*

The *treasury management platform* for global finance teams.

THE PROBLEM

Global businesses are *financially underserved.*

01 / Idle cash

0.01%

No access to high-yield capital markets products. Operating cash sits idle in low-yield bank accounts.

02 / Cross-border

3–5%

Lost on every wire. Cross-border payments bleed FX fees, take days to settle, and arrive opaque.

THE SOLUTION

Put idle cash *to work.* Send money *anywhere,* instantly.

01 **_High-yield_ capital markets**

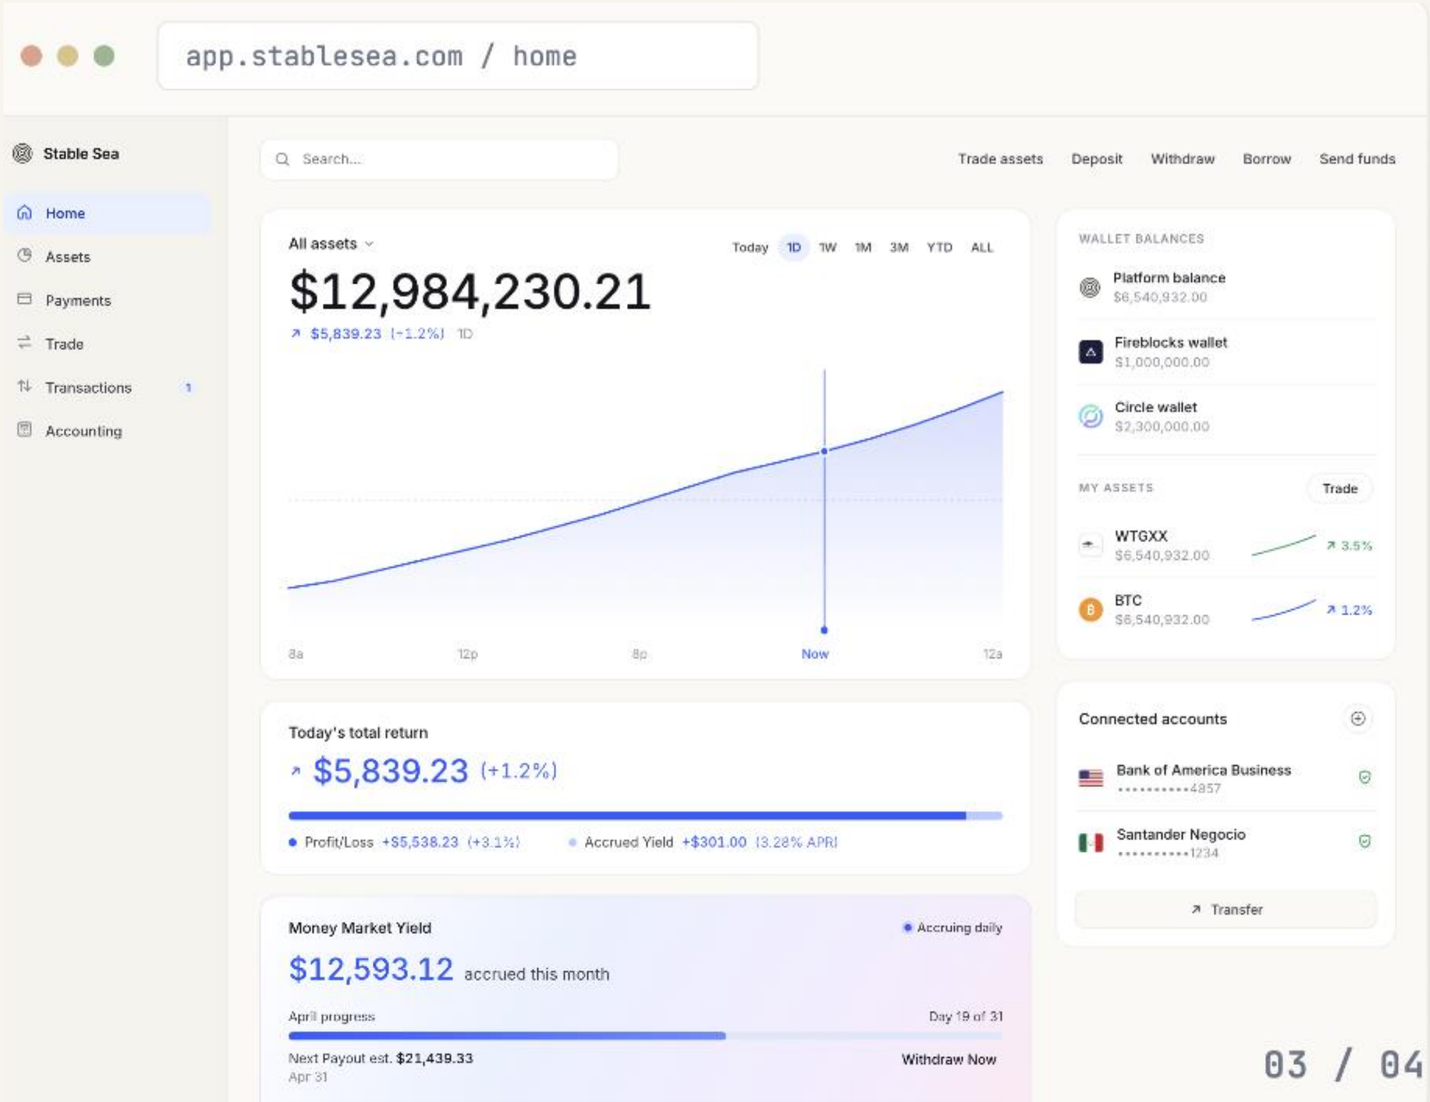

Idle cash earns institutional rates — money markets, treasuries, gold, tokenized securities.

02 **_40+_ currencies, cheap FX**

Mid-market rates with spreads in basis points, not percent. Pay suppliers, contractors, and subsidiaries worldwide.

03 **_T+0_ settlement, 24/7**

Funds clear in seconds — including weekends and bank holidays. One balance, one dashboard.

Build with us by:

- Platform ready
- APIs available for embedded solutions

Stable Sea brings institutional-grade yield and global payments to the businesses that move the real economy.
